Cooper, 2025-05-15 Many people may know about the blazing crash of the Hindenburg in 1937 but are possibly unaware that it had made 62 flights before its final journey including one transporting author Leslie Charteris creator of The Saint The disaster however did not end the airship era blimps escorted convoys during World War II and were a part of air defense systems in the 1950s and 1960s Airships still fly today and new models are in the construction phase This book examines this branch of aviation history delving into the science and engineering of airships and their design flaws weather difficulties and operational errors The chapters focus on function lift propulsion materials ground handling and so forth The book concludes with speculations about future airship designs and missions **Proceedings of IDEAS 2019** Luciana Pereira, José Reginaldo Hughes Carvalho, Petter Krus, Magnus Klostén, Victor Juliano De Negri, 2020-08-11 This book presents the proceedings of the IDEAS Conference which is intended as a forum for a new generation of researchers IDEAS is an arena that encourages researchers to defy their field's boundaries leveraging disciplinary mindset into contributions to broad domains within the Science Technology Engineering Entrepreneurship and Management Further IDEAS explores novel questions and challenges existing policies and practices on how to apply science and technology as an input to design more innovative and sustainable systems that promote human well being **Inertial Quasi-Velocity Based Controllers for a Class of Vehicles** Przemyslaw Herman, 2022-02-26 This book offers a timely overview of nonlinear control methods applied to a set of vehicles and their applications to study vehicle dynamics The first part of the book presents the mathematical models used for describing motion of three classes of vehicles

such as underwater vehicles hovercrafts and airships In turn each model is expressed in terms of Inertial Quasi Velocities Various control strategies from the literature including model free ones are then analyzed The second part and core of the book guides readers to developing model based control algorithms using Inertial Quasi Velocities Both non adaptive and adaptive versions are covered Each controller is validated through simulation tests which are reported in detail In turn this part shows how to use the controllers to gain information about vehicle dynamics thus describing an important relationship between the dynamics of the moving object and its motion control The effects of mechanical couplings between variables describing vehicle motion due to inertial forces are also discussed All in all this book offers a timely guide and extensive information on nonlinear control schemes for unmanned marine and aerial vehicles It covers specifically the simulation tests and is therefore meant as a starting point for engineers and researchers that would like to verify experimentally the suitability of the proposed models in real vehicles Further it also supports advanced level students and educators in their courses on vehicle dynamics control engineering and robotics History and Evolution of Aircraft Ahmed F.
