Novae And Related Stars:

Novae and Related Stars Yozo Yokota, 2012-12-06 Michael Friedjung Though known since antiquity novae are still poorly understood and present many problems There has tended to be a lack of communication between theoreticians and observers and between different schools of thought in spite of the advances of recent years in certain directions observations of ordinary novae at minimum and of dwarf novae theory of the causes of the explosion etc The meeting whose proceedings are contained in this volume was organized to stimulate a confrontation between the different ideas and results The subject has changed a lot since 1963 when the previous international meeting was held There were 61 participants at the conference from 17 countries so very many groups doing research in the field of novae were represented The reader will see that the subject has become more physical we know for instance that the binary nature of novae is essential but much work remains to be done There is still a large gulf between theory and observation May he find here many new ideas for future research I would like to thank the French Centre National de la Recherche Scientifique for providing financial help I must also thank the other members of the scientific committee Profs and Drs Bath Mustel Payne Gaposchkin Sparks and Warner and of the local committee Audouze Mrs Steinberg Vauclair **Non-stable Stars** International Astronomical Union, 1957

Non-Stable Stars George H. Herbig, 2015-12-03 Originally published in 1957 this book contains papers from the Ninth General Assembly of the International Astronomical Union Offering a reassessment of non stable stars and recognising relocating and redefining the issues surrounding stellar instability this book will be a valuable reference work to anyone interested in the history of physics astronomy and cosmology **The Astrophysics of Emission-Line Stars** Tomokazu Kogure, Kam-Ching Leung, 2010-05-05 Many types of stars show conspicuous emission lines in their optical spectra These stars are broadly referred to as emission line stars Emission line stars are attractive to many people because of their spectacular phenomena and their amazing varieties and variability This book offers general information on emission line stars starting from a brief introduction to stellar astrophysics and then moving to a broad overview of emission line stars including early and late type stars as well as pre main sequence stars Detailed references and index are prepared for further reading Tomokazu Kogure's email address tkogure pa2 so net ne jp [Cataclysmic Variables and Related Objects: pp.i-xc, 1-342](#) Margherita Hack, Constanze La Dous, 1993 **Second Catalogue of X-ray Sources** Pavel Rafaelovich

Amnuel, 2012-12-06 **The Pillars of Creation** Martin Beech, 2016-12-28 This book explores the mechanics of star formation the process by which matter pulls together and creates new structures Written for science enthusiasts the author presents an accessible explanation of how stars are born from the interstellar medium and giant molecular clouds Stars produce the chemicals that lead to life and it is they that have enabled the conditions for planets to form and life to emerge Although the Big Bang provided the spark of initiation the primordial universe that it sired was born hopelessly sterile It is only through the continued recycling of the interstellar medium star formation and stellar evolution that the universe has

been animated beyond a chaotic mess of elementary atomic particles radiation dark matter dark energy and expanding spacetime Using the Milky Way and the Eagle Nebula in particular as case studies Beech follows every step of this amazing process

Cataclysmic Variables and Related Objects Margherita Hack, Constanze La Dous, 1993 This volume begins with an introductory chapter on general properties of cataclysmic variables Chapters 2 through 5 of Part 1 are devoted to observations and interpretation of dwarf novae and nova like stars Chapters 6 through 10 Part 2 discuss the general observational properties of classical and recurrent novae the theoretical models and the characteristics and models for some well observed classical novae and recurrent novae Chapters 11 through 14 of Part 3 are devoted to an overview of the observations of symbiotic stars to a description of the various models proposed for explaining the symbiotic phenomenon and to a discussion of a few selected objects respectively Chapter 15 briefly examines the many unsolved problems posed by the observations of the different classes of cataclysmic variables and symbiotic stars

RS Ophiuchi (1985) and the Recurrent Nova Phenomenon M. F. Bode, 1987-12 This international conference brought together over 50 astronomers from around the world The meeting centred around a single object the recurrent nova RS Ophiuchi a star which had undergone four recorded outbursts before the latest event in 1985 Observations of previous outbursts discussed in detail in one of the review talks already indicated that RS Ophiuchi is a unique object of great astronomical significance The outburst mechanism is probably similar to that of classical novae but the interaction of the ejecta with a pre existing shell of material give it the characteristics of a young supernova remnant However unlike supernova remnants the evolution occurs before our very eyes Following the latest outburst a frenzy of activity ensued resulting in the acquisition of detailed observations from the radio where rapidly expanding jets were discovered to the X ray where RS Ophiuchi turned out to be one of the brightest soft X ray sources yet observed The Proceedings report the many exciting and unexpected observational results right across the electromagnetic spectrum in both RS Ophiuchi and related objects Theoretical work on the cause of the outburst and remnant evolution is also given prominence The result is a much fuller understanding of RS Ophiuchi and its important standing in several branches of astrophysical research

Interacting Binary Stars Jorge Sahade, Frank Bradshaw Wood, 2015-11-24 Interacting Binary Stars deals with the development ideas and problems in the study of interacting binary stars The book consolidates the information that is scattered over many publications and papers and gives an account of important discoveries with relevant historical background Chapters are devoted to the presentation and discussion of the different facets of the field such as historical account of the development in the field of study of binary stars the Roche equipotential surfaces methods and techniques in space astronomy and enumeration of binary star systems that are studied meticulously by scientists Astronomers astrophysicists physicists researchers and students in related fields will find the book interesting

Viktorovich Sobolev, 1969 *Double Stars, Physical Properties and Generic Relations* B. Hidayat, Zdenek Kopal, Jürgen H. Rahe, 2012-12-06 The Bosscha Observatory in Lembang Java Indonesia celebrated in 1983 its 60th anniversary Since its foundation the physical properties of binary systems have formed a major research topic of this observatory Until 1970 the study of visual binaries and the determination of orbits received most emphasis Since then also the evolution of close binary systems such as X ray binaries Wolf Rayet binaries and binary pulsars has been researched with priority in Lembang It seemed thus appropriate that a Colloquium devoted to the study of binary systems be held in Lembang at the time of the Observatory's anniversary In the Colloquium the role of wide double and multiple systems received special emphasis not only because of the long tradition of visual binary research at Lembang but also because their role in documenting stellar evolution has been largely overlooked in recent decades and needs to be brought into focus with the information forthcoming from close binaries The Colloquium covered the physical properties of visual as well as close binary systems and their generic relations in the broadest possible sense It was sponsored by the International Astronomical Union as IAU Colloquium No 80 Double Stars Physical Properties and Generic Relations After the official opening ceremony the meeting started with a discussion on the future of astronomy in Asia The scientific sessions began with the V Bappu Memorial Lecture on the Evolution of Binary Systems presented by Z Kopal **Literature 1981, Part 2** S. Böhme, W. Fricke, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, D. Rosa, L. D. Schmädel, G. Zech, 2013-04-18 **Stellar Spectral Classification** Richard O. Gray, Christopher J. Corbally, 2021-06-08 Written by leading experts in the field Stellar Spectral Classification is the only book to comprehensively discuss both the foundations and most up to date techniques of MK and other spectral classification systems Definitive and encyclopedic the book introduces the astrophysics of spectroscopy reviews the entire field of stellar astronomy and shows how the well tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics The book begins with a historical survey followed by chapters discussing the entire range of stellar phenomena from brown dwarfs to supernovae The authors account for advances in the field including the addition of the L and T dwarf classes the revision of the carbon star Wolf Rayet and white dwarf classification schemes and the application of neural nets to spectral classification Copious figures illustrate the morphology of stellar spectra and the book incorporates recent discoveries from earth based and satellite data Many examples of spectra are given in the red ultraviolet and infrared regions as well as in the traditional blue violet optical region all of which are useful for researchers identifying stellar and galactic spectra This essential reference includes a glossary handy appendixes and tables an index and a Web based resource of spectra In addition to the authors the contributors are Adam J Burgasser Margaret M Hanson J Davy Kirkpatrick and Nolan R Walborn **Scientific and Technical Aerospace Reports**, 1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Planetary

Nebulae Stuart R. Pottasch, 2012-12-06 The purpose of this book is to give a detailed description of the planetary nebulae including the relevant astronomical observations and their interpretation Considerable attention is given to the evolution of these objects as well as to their physical characteristics It is hoped that the book be useful to both advanced research workers and to students with some background in astronomy In this regard the book should serve as a text as well as a reference work The many tables included are expected to be useful for both purposes The references are generally not included in the text except for historical purposes in an effort to improve readability References are given at the end of each chapter together with sufficient text to describe their content No attempt has been made to make the list of references complete on the contrary it has generally been limited to the most recent literature on the subject which in turn refers to earlier research Again exceptions have been made for references of historical interest *NASA Technical Translation* ,1969
