Novel Cofactors Judith P. Klinman, Joanne E. Dove, 2001-10-05 A cofactor is a component part of many enzymes and functions by uniting with another molecule in order to become active The use of cofactors to supplement the native amino acids of a protein is essential to maintain the chemical capabilities necessary for organisms to survive This volume focuses on the significant advances of the past decade in identifying and describing new cofactors either small molecules or those Handbook on Metalloproteins Ivano Bertini, Astrid Sigel, 2001-06-29 This Handbook on derived posttranslationally Metalloproteins focuses on the available structural information of proteins and their metal ion coordination spheres It centers on the metal ions indispensable for life but also considers metal ions used as substitution probes in studies of metalloproteins Emphasizing the structure function relationship the book covers the commo Enzymatic Fuel Cells Heather R. Luckarift, Plamen B. Atanassov, Glenn R. Johnson, 2014-05-06 Summarizes research encompassing all of the aspects required to understand fabricate and integrate enzymatic fuel cells Contributions span the fields of bio electrochemistry and biological fuel cell research Teaches the reader to optimize fuel cell performance to achieve long term operation and realize commercial applicability Introduces the reader to the scientific aspects of bioelectrochemistry including electrical wiring of enzymes and charge transfer in enzyme fuel cell electrodes Covers unique engineering problems of enzyme fuel cells such as design and optimization Cofactor Biosynthesis: A Mechanistic Perspective ,2001-01-02 The longest running serial published by Academic Press continues its well respected run with Volume 61 a special volume in which a guest editor has come on board and has assembled some well known contributors who are international authorities in the field Together they tackle some of the latest topics in the field such as riboflavin and folate biosynthesis biotin and lipoic acid biosynthesis nicotinamide adenine dinucleotide biosynthesis biosynthesis of vitamin B6 and structurally related derivatives pantothenic acid and coenzyme A biosynthesis mechanistic biosynthesis of protein derived redox cofactors ascorbic acid biosynthesis biosynthesis of menaquinone and ubiquinone Vitamin B12 biosynthesis biosynthesis of the methanogenic cofactors and thiamin biosynthesis Biochemistry of Vitamin B6 and PQQ G. Marino, G. Sannia, F. Bossa, 2012-12-06 The International Meeting on Vitamin B6 and Carbonyl Catalysis took place on Capri Italy from 22nd to 27th May 1994 and was organized in conjunction with the 3rd Symposium on PQQ and Quinoproteins It was an extraordinary occasion for scientists from all over the world to meet and discuss new developments in these overlapping fields Several sessions were dedicated to the molecular aspects of Vitamin B6 and Quinone dependent enzymes as well as to the cellular biomedical and nutritional aspects The congress was inaugurated by Paolo Fasella in his capacity as General Director of Science Research and Development of the Commission of the European Communities with an overview on International Scientific Collaboration The scientific sessions started with a talk on the History of Vitamin B6 given by David Metzler who at the very last minute presented Esmond Snell's paper adding some personal remarks Unfortunately both

Esmond Snell and Alton Meister had to unexpectedly cancel the trip to Capri These proceedings contain the papers presented as oral contributions and a few selected poster presentations. The limited number of pages meant we could not publish many interesting poster presentations including those selected for the three lively and exciting evening poster discussion sessions called by the organizers Vino taralli and discussion *Introduction to Enzyme and Coenzyme Chemistry* T. D. H. Bugg, 2009-02-12 Enzyme catalysis is a topic of fundamental importance in organic bio organic and medicinal chemistry This new edition of a very popular textbook provides a concise introduction to the underlying principles and mechanisms of enzyme and coenzyme action from a chemical perspective Whilst retaining the overall structure of the first edition preliminary chapters describe the basic principles of enzyme structure and catalysis moving through to detailed discussions of the major classes of enzyme processes in the later chapters the book has been thoroughly updated to include information on the most recent advances in our understanding of enzyme action A major feature of the second edition is the inclusion of two colour figures of the active sites of enzymes discussed in the text in order to illustrate the interplay between enzyme structure and function Problems with outline answers at the end of each chapter give the student the chance to the check their understanding of the material As a concise but comprehensive account Introduction to Enzyme and Coenzyme Chemistry will continue to prove invaluable to both undergraduate and postgraduate students of organic bio organic and medicinal chemistry Tim Bugg is professor of biological chemistry in the Department of Chemistry University of Warwick UK
