Nuclear Imperatives and Public Trust Luther J. Carter, 2015-08-11 This title first published in 1987 examines the topic of nuclear waste management and the way in which the public reacts to this issue Part 1 explores the sources of public unease such as the way in which nuclear waste had failed to be properly contained in the past Part 2 looks at the search for a waste policy and the introduction of The Nuclear Waste Policy Act Part 3 examines the waste problem from the standpoint of it being an international issue and finally Part 4 looks to the future and the lessons that we can learn from past nuclear waste management failures This book will be of interest to students of environmental management Decision-making and Radioactive Waste Disposal Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry Forum for Applied Research and Public Policy, 1999 **The Road to Yucca Mountain** J. Samuel Walker, 2009-09-02 In *The Road to Yucca Mountain* J Samuel Walker traces the U S government's tangled efforts to solve the technical and political problems associated with radioactive waste From the Manhattan Project through the designation in 1987 of Yucca Mountain in Nevada as a high level waste repository Walker thoroughly investigates the approaches adopted by the U S Atomic Energy Commission AEC He explains the growing criticism of the AEC's waste programs such as the AEC's embarrassing failure in its first serious effort to build a high level waste repository in a Kansas salt mine Clearly and accessibly Walker explains the issues surrounding deep geological disposal and surface storage of high level waste and spent reactor fuel He analyzes the equally complex and divisive question of fuel reprocessing He weaves reliable research with fresh insights about nuclear science geology politics and public administration making this original and authoritative account an essential guide for understanding the continuing controversy over an illusive and emotional topic *Radioactive Waste Disposal at Sea* Lasse Ringius, 2000-11-20 Most studies of environmental regimes focus on the use of power the pursuit of rational self interest and

the influence of scientific knowledge Lasse Ringius focuses instead on the influence of public ideas and policy entrepreneurs He shows how transnational coalitions of policy entrepreneurs can build environmental regimes and how global environmental nongovernmental organizations can act as catalysts for regime change This is the first book length empirical study of the formation of the global ocean dumping regime in 1972 and its subsequent development which culminated in the 1993 global ban on the dumping of low level radioactive waste at sea Ringius describes the structure within which global ocean dumping policy particularly policy with regard to the disposal of radioactive waste is embedded He also examines the political construction of ocean dumping as a global environmental problem the role of persuasion and communication in an international setting and the formation of international public opinion He does not argue that the influence of ideas alone explains how regimes develop but claims that it is necessary to understand how actors interests and ideas together influence regimes and international environmental policy

**Governance of Radioactive Waste, Special Waste and Carbon Storage** Thomas Flüeler, 2023-04-05 This book demonstrates that the long term safety of nuclear waste repositories special waste disposal and carbon storage CCS is highly challenging and monitoring may contribute to substantiate evidence support decision making and legitimise the programme Deep geological disposal is a long term safety issue and in parallel requires long term institutional involvement of the technoscientific community waste producers public administrators NGOs and the public What where and when to monitor is determined by its goal setting It may be operational confirmatory in the near field or environmental far field Strategic monitoring as proposed here contributes to process implementation or policy and institutional surveillance It not only addresses the controversial long lasting problem of nuclear other toxic or CO2 waste but investigates some ways to approach for solutions or solution spaces not just technical but also institutional societal and personal It includes the tailored transfer of knowledge concept and system understanding experience and documentation to specific audiences above It is an integrative tool of targeted yet adaptive management and may be applicable to other long term sociotechnical fields

**Radioactive Waste** Frans Berkhout, 2003-10-04 This analysis of nuclear strategy the politics of nuclear power and the shifting emphasis of government regulation redefines the issue of radwaste management and sets it at the centre of the current debate about the environment

**Radioactive Waste Disposal and Geology** Konrad Krauskopf, 2013-03-07 The perception of radioactive waste as a major problem for the industrial world has developed only recently Four decades ago the disposal of such waste was regarded as a relatively minor matter Those were the heady days when nuclear fission seemed the answer to the world s energy needs the two wartime bombs had demonstrated its awesome power and now it was to be harnessed for the production of electricity the excavation of canals even the running of cars and airplanes In all applications of fission some waste containing radioactive elements would be generated of course but it seemed only a trivial annoyance a problem whose solution could be deferred until the more exciting challenges of constructing reactors and devising more efficient weapons had been mastered So waste accumulated some in tanks and some

buried in shallow trenches These were recognized as only temporary makeshift measures because it was known that the debris would be hazardous to its surroundings for many thousands of years and hence that more permanent disposal would someday be needed The difficulty of accomplishing this more lasting disposal only gradually became apparent The difficulty has been compounded by uncertainty about the physiological effects of low level radiation by the inadequacy of detailed knowledge about the behavior of engineered and geologic materials over long periods under unusual conditions and by the sensitization of popular fears about radiation in all its forms following widely publicized reactor accidents and leaks from waste storage sites

**Environmental Policy Analysis and Practice** Michael R Greenberg, 2008-03-13 Pressing environmental challenges are frequently surrounded with stakeholders on all sides of the issues Opinions expressed by government agencies the private sector special interests nonprofit communities and the media among others can quickly cloud the dialogue leaving one to wonder how policy decisions actually come about In *Environmental Policy Analysis and Practice* Michael R Greenberg cuts through the complicated layers of bureaucracy science and the public interest to show how all policy considerations can be broken down according to six specific factors 1 the reaction of elected government officials 2 the reactions of the public and special interests 3 knowledge developed by scientists and engineers 4 economics 5 ethical imperatives and 6 time pressure to make a decision The book is organized into two parts with the first part defining and illustrating each one of these criteria Greenberg draws on examples such as nuclear power pesticides brownfield redevelopment gasoline additives and environmental cancer but focuses on how these subjects can be analyzed rather than exclusively on the issues themselves Part two goes on to describe a set of over twenty tools that are used widely in policy analysis including risk assessment environmental impact analysis public opinion surveys cost benefit analysis and others These tools are described and then illustrated with examples from part one Weaving together an impressive combination of practical advice and engaging first person accounts from government officials administrators and leaders in the fields of public health and medicine this clearly written volume is poised to become a leading text in environmental policy

**Science, Technology, And Politics** Gary Bryner, 2019-06-21 This book began several years ago as a project organized by members of the Science and Technology Studies section of the American Political Science Association It is part of an ongoing attempt by members of the section and others to focus scholarly attention on the political and social implications of technological change and scientific advances Part of the concern is to identify theories conceptual frameworks and concepts from political science that can usefully be applied to the study of science and technology Part of the concern is to explore how science and

technology-related concerns help illuminate and test some of the enduring theories of political science We hope to contribute to the development of a strong theoretical underpinning for science and technology studies We hope that such an enrichment of the theoretical bases for understanding science and technology related phenomena will also contribute to more effective and appropriate public policies for regulating and encouraging scientific and technological developments This book is an attempt to marry theoretical exposition and applied policy inquiry     Closing the Circle on the Splitting of the Atom DIANE Publishing Company,1995-03 Describes environmental safety and health problems throughout the nuclear weapons complex and what the U S Dept of Energy is doing to address them Covers building nuclear warheads the process wastes and other byproducts of the cold war spent nuclear fuel plutonium residues radioactive waste transuranic waste hazardous waste etc contamination and cleanup an international perspective transition to new missions and looking to the future Over 100 b w photos Extensive glossary and bibliography     *Phytorestoration of Abandoned Mining and Oil Drilling Sites* Kuldeep Baudh,John Korstad,Pallavi Sharma,2020-11-18 *Phytorestoration of Abandoned Mining and Oil Drilling Sites* presents case studies and the latest research on the most effective methods to address the large amounts of waste materials released due to mining and oil drilling In particular phytoremediation is described as a novel eco friendly cost effective method for extracting toxic compounds by plants for the restoration of contaminated sites Plantings on these contaminated areas lead to the removal of toxic substances such as heavy metals and hydrocarbons improvement in the physicochemical and biological properties of the soil long term forest ecosystem rehabilitation restoration of ecosystem productivity stability and biological diversity and reductions in CO<sub>2</sub> Utilizing worldwide examples this book discusses the potential of phytoremediation as an ideal solution for sites contaminated by mining and oil drilling sites Includes exploration of efficient plants for restoring contaminated former mining and oil drilling sites Addresses adverse impacts of toxicants released from mining activities on living organisms including human health Presents characteristics of contaminated former mining and oil drilling sites

*Social Discourse and Environmental Policy* Helen Addams,John L. R. Proops,2000-11-27 As governments and the wider public become increasingly concerned about environmental problems the necessity for competent environmental policies is growing The contributors to this highly original book attempt to demonstrate how the use of Q methodology can result in the development of more effective socially sensitive environmental policy options The book highlights the history of Q methodology a technique for systematically studying the subjectivity of individuals and provides a brief yet comprehensive account of its theory and a detailed guide to the various stages of a Q study The methodology is then applied to explore the discourses concerning the relationship between society and a diverse range of environmental issues including environmental protest civil aviation policy forest policy and land use options     Environmental Politics and Policy Walter A. *Approaches to Risk Management in Remediation of Radioactively Contaminated Sites* National Council on Radiation Protection and Measurements, 2004      *The Mining Law* John D. Leshy, 1987 In this highly entertaining as well as profoundly scholarly study of the 1872 Mining Law John Leshy has produced both a legal treatise and a history of the West written from the vantage point of mineral exploration and production The Mining Law illuminates some of the more obscure corners of Western history federal land and resource policy and the relationships among various branches of government in making and carrying out policy For more than a century the mining of hard rock minerals in the United States has been carried out under this law which was written to promote mineral development in the age of the pick and shovel prospector It is the last important survivor of the great laws undergirding the westward expansion The Mining Law has never been changed to reflect modern mining technologies or newer social values that question whether mineral extraction is the best use of the land and its resources From its enactment the Mining Law's inadequacies have given rise to illegal abuse litigation and patchwork regulation by federal agencies and judge made law Leshy explains how the law has survived by a combination of executive and judicial manipulation in the face of legislative paralysis Today as concern mounts about economic efficiency government regulation environmental protection the rebuilding of the nation's industrial base and competing uses of the land and its resources the argument for reform of the law becomes compelling The present law not only obstructs the very mineral development it was designed to promote it may no longer be in the national interest Certainly any future attempts to rewrite or amend the Law will start off with Leshy's exposition and analysis of its origins operation and implementation and his detailed examination of the issues surrounding the law its interpretation by courts and administrative agencies and the attempts to adapt the law to changing conditions and social goals Assessing the prospect for reform in today's political climate he suggests arrangements regarding the law's reform that might be concluded by industry small operators and environmental protection advocates as well as creative measures that might be taken by Congress the president and the courts      Disposition of High-Level Radioactive Waste Through Geological Isolation National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Radioactive Waste Management, 1999-11-07 During the next several years decisions are expected to be made in several countries on the further development and implementation of the geological disposition option The Board on Radioactive Waste Management BRWM of the U S National Academies believes that informed and reasoned discussion of relevant scientific engineering and social

issues can and should play a constructive role in the decision process by providing information to decision makers on relevant technical and policy issues A BRWM initiated project including a workshop at Irvine California on November 4 5 1999 and subsequent National Academies report to be published in spring 2000 are intended to provide such information to national policy makers both in the U S and abroad To inform national policies it is essential that experts from the physical geological and engineering sciences and experts from the policy and social science communities work together Some national programs have involved social science and policy experts from the beginning while other programs have only recently recognized the importance of this collaboration An important goal of the November workshop is to facilitate dialogue between these communities as well as to encourage the sharing of experiences from many national programs The workshop steering committee has prepared this discussion for participants at the workshop It should elicit critical comments and help identify topics requiring in depth discussion at the workshop It is not intended as a statement of findings conclusions or recommendations It is rather intended as a vehicle for stimulating dialogue among the workshop participants Out of that dialogue will emerge the findings conclusions and recommendations of the National Academies report The Rise of Nuclear Fear Spencer R. Weart, 2012-03-19 After the Fukushima Nuclear Power Plant had a meltdown protesters around the world challenged nuclear power Climate change has never aroused this visceral dread Weart dissects this paradox showing that powerful images surrounding nuclear energy hold us captive allowing fear rather than facts to drive our thinking and public policy **Tackling Long-Term Global Energy Problems** Daniel Spreng, Thomas Flüeler, David L. Goldblatt, Jürg Minsch, 2012-01-03 This book makes a case for a multidisciplinary and transdisciplinary approach to energy research one that brings more of the social sciences to bear Featuring eight studies from across the spectrum of the social sciences each applying multiple disciplines to one or more energy related problems the book demonstrates the strong analytical and policy making potential of such a broadened perspective Case studies include energy transitions of households in developing countries the curse of oil politics and visions for renewables economics and ethics in emissions trading and carbon capture and storage
