Nuclear Submarines:

US Nuclear Submarines Jim Christley, 2012-01-20 The adoption of nuclear power revolutionized submarine design. Vessels can stay underwater for months trailing the enemy or training weapons on land targets from secret positions always there never seen. Jim Christley a former submariner explores here the influence of Admiral Hyman Rickover in cautiously introducing these stealthy machines of war and frankly discusses the power and perils of using nuclear reactors at sea. Using unique and detailed artwork he outlines the many evolving aspects of design within the submarine classes from the very first nuclear submarine USS Nautilus to the classes under construction even now. *Nautilus to Columbia* James C. Goodall, 2023-11-23

A highly illustrated history of the US Navy's nuclear submarine program from the postwar years to the 2020 Columbia class SSBNs. James C. Goodall covers the origins, design, and development of the US Navy's fleet of nuclear powered submarines. This program was developed under the command of Hiram G. Rickover, the Father of the Nuclear Navy, who oversaw the commissioning of the very first nuclear powered attack submarine, the USS Nautilus (SSN 571) in 1952. This was a truly revolutionary design. Until the advent of nuclear power, the world's submarine fleets traveled on the surface at night to charge their batteries and only dove below the surface when enemy ships or planes were spotted. With the development of the USS Nautilus, the US Navy now had the ability to stay submerged for not just hours or days but to hide out of harm's way for weeks or months at a time. This highly illustrated book covers all of the 220 submarine hulls built and delivered to the US Navy from the USS Nautilus through to the Navy's newest class of submarine, the Columbia class SSBNs. The story of the Nuclear Navy from its origins up to the present day is told through more than 1,300 images from official and archive sources as well as the author's own personal collection, some of which have never been published before. *Nuclear Submarines of Advanced Design* United States. Congress. Joint Committee on Atomic Energy, 1968. Classified material has been deleted. [Soviet Cold War Attack Submarines](#) Edward Hampshire, 2020-09-17

In this highly detailed book, naval historian Edward Hampshire reveals the fascinating history of the nuclear powered attack submarines built and operated by the Soviet Union in the Cold War, including each class of these formidable craft as they developed throughout the Cold War period. The November class, which were the Soviet Union's first nuclear submarines, had originally been designed to fire a single enormous nuclear tipped torpedo but were eventually completed as boats firing standard torpedoes. The Alfa class were perhaps the most remarkable submarines of the Cold War, titanium hulled, which was light and strong but extremely expensive and difficult to weld successfully, crewed with only thirty men due to considerable automation and 30% faster than any US submarines. They used a radical liquid lead bismuth alloy in the reactor plant. The Victor class formed the backbone of the Soviet nuclear submarine fleet in the 1970s and 1980s as hunter-killer submarines began to focus on tracking and potentially destroying NATO ballistic missile submarines. The Sierra classes were further titanium hulled submarines, and the single Mike class submarine was an experimental type containing a number of innovations. Finally, the Akula class were being

constructed as the Cold War ended and these boats form the mainstay of the Russian nuclear attack submarine fleet today This book explores the design development and deployment of each of these classes in detail offering an unparalleled insight into the submarines which served the Soviet Union throughout the Cold War period The text is supported by stunning illustrations photographs and diagrams of the submarines

Power Shift Dan Gillcrist,2006 Power Shift is the first comprehensive account of the US Navy s Submarine Force transition from diesel to nuclear power It represented the biggest most costly and disruptive technological change in naval history This was all done against the backdrop of intense Cold War operations where US submarines played a critical role in maintaining the peace The story is told by the people who were part of the power shift From seamen to admirals they tell the stories of how the technological and cultural changes affected them

China's Future Nuclear Submarine Force Lyle J Goldstein,Andrew S. Erickson,William S. Murray,Andrew Wilson,2012-04-30 One of the key concerns of naval strategists and planners today is the nature of the Chinese geostrategic challenge Conceding that no one can know for certain China s intentions in terms of future conflict the editors of this hot topic book argue that the trajectory of Chinese nuclear propulsion for submarines may be one of the best single indicators of China s ambitions of global military power Nuclear submarines with their unparalleled survivability remain ideal platforms for persistent operations in far flung sea areas and offer an efficient means for China to project power This collection of essays presents the latest thinking of leading experts on the emergence of a modern nuclear submarine fleet in China Each contribution is packed with authoritative data and cogent analysis The book has been compiled by four professors and analysts at the U S Naval War College who are co founders of the college s recently established China Maritime Studies Institute Given the opaque nature of China s undersea warfare development readers will benefit from this penetrating investigation that considers the potential impact of even the most revolutionary changes in Chinese nuclear submarine capabilities The editors believe that to ignore such possibilities would be the height of strategic folly and represent inexcusable negligence in terms of U S national defense Anyone who is interested in the future of the U S Navy and the defense of the United States will find this book to be essential reading

Decommissioned Russian Nuclear Submarines and International Cooperation Charles Krupnick,2017-07-06 With the end of the Cold War Russia s submarines were no longer needed to deter or fight Western navies and were very expensive to operate and maintain Older submarines were taken out of service in large numbers but without firm plans and

infrastructure in place to remove and adequately care for their nuclear components problems soon developed over the disposition of spent fuel assemblies Problems arose also of course between Russia and the international community as to the best way to respond to the challenge This book looks at those problems first discussing Russia s economy its environment and the Russian Navy and then covering in detail the spent fuel of Russian submarines and related nuclear problems The engagement of the international community on the issue is then addressed A theoretical analysis is offered on how Russia s fellow nations can help remedy a troubling environmental problem in a difficult country *Submarines* Stuart Murray,2015-12-15 This book introduces readers to the underwater world of submarines showing them how these amazing watercraft have used stealthy secret attacks throughout history to revolutionize ocean warfare Vibrant images and detailed diagrams of submarines from the U S Britain Russia and Germany are featured from U boats of the early 20th century to today s fastest and most powerful nuclear submarines Readers will see firsthand how developments in technology have allowed submarines to patrol at greater and greater depths undetected Vivid visuals and comprehensive text are combined to present a high interest take on both STEM and social studies curricula Sustaining U.S. Nuclear Submarine Design Capabilities ,2007 The U S submarine eet currently numbers more than 50 fast attack submarines SSNs and 18 submarines built to launch ballistic missiles SSBNs All are nuclear powered to maximize the duration and speed of underwater operations While the submarine eet has been decreasing in size since the end of the Cold War it is anticipated that the U S Navy will sustain a force of several dozen boats into the foreseeable future Submarines are almost continually being built to replace older ones that must be retired As is the case with surface ships submarines are built in classes sets of boats constructed to a common design Designing a new class of nuclear submarines is a very large and complex endeavor lasting 15 years or longer and requiring 15 000 to 20 000 man years at the prime shipyard contractor alone Sustaining U.S. Nuclear Submarine Design Capabilities John Frederic Schank,2007 The U S submarine eet currently numbers more than 50 fast attack submarines SSNs and 18 submarines built to launch ballistic missiles SSBNs All are nuclear powered to maximize the duration and speed of underwater operations While the submarine eet has been decreasing in size since the end of the Cold War it is anticipated that the U S Navy will sustain a force of several dozen boats into the foreseeable future Submarines are almost continually being built to replace older ones that must be retired As is the case with surface ships submarines are built in classes sets of boats constructed to a common design Designing a new class of nuclear submarines is a very large and complex endeavor lasting 15 years or longer and requiring 15 000 to 20 000 man years at the prime shipyard contractor alone Cold War Submarines Norman Polmar,Kenneth J.
