Candell-Riera, Joan Castell-Conesa, Santiago Aguandé-Bruix, 2012-12-06 The clinical use of nuclear cardiology for the assessment of myocardial ischemia continues to grow at an unprecedented rate Part of the reason for this growth is the technical advances in single photon emission computerized tomography SPECT SPECT has been shown to provide high contrast images superior to planar imaging techniques An important and recent technical advancement in SPECT has been ECG gated myocardial perfusion SPECT to generate simultaneous myocardial perfusion and function information from a single study Automated quantitative techniques have facilitated the widespread application of this breakthrough Another recent advancement has been the use of attenuation correction techniques to help remove the effects of the physical phenomena that degrades the visual and quantitative accuracy of SPECT images Another reason for the growth of the clinical use of nuclear cardiology is the large body of published evidence documenting the effectiveness of SPECT techniques for assessing myocardial ischemia myocardium at risk viable myocardium and stunned or hibernating myocardium These assessments have been shown to be important not only in diagnosis but also in prognosis This book is divided into three major sections each addressing the important topics of nuclear cardiology The first section is a that have led to the clinical success description of the technical aspects of state of the art myocardial perfusion SPECT imaging This section deals with the radionuclides instrumentation image acquisition and analysis interpretation and quantification techniques used in the most progressive nuclear cardiology clinics Advances in Noninvasive Electrocardiographic Monitoring Techniques Hans-Heinrich Osterhues, Vinzenz Hombach, Arthur J. Moss, 2000-02-29 An outgrowth of the Biennial International Congress on Holter and Noninvasive Electrocardiology held in Ulm Germany in May 1998 The 46 papers provide a snapshot of the field at the end of the century for clinical cardiologists and internists who use electrocardiographic procedures in managing their patients researchers actively involved in the field and students who will be working in it They cover physiology and pathophysiology from genes and phenotypes to the autonomic nervous system aspects investigated by different methods such as P wave and QRS and T wave alternans repolarization ischemic heart disease ambulatory blood pressure monitoring and other methods and non linear dynamics and newer signal detection and analysis techniques **Angiology in Practice** A-M. **Progress in Catheter Ablation** Liong Bing Liem,Eugene Downar,2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory However conventional RF ablation has several well known limitations most notably is its ability to only produce relatively small point lesions rendering it effective only for an arrhythmia with a small and or a superficial target It was soon recognized that the technology would not likely to have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia Indeed the application of conventional RF technology in these complex but common arrhythmia has yielded unsatisfactory results
