Nuclear Localization Of Growth Factors And Of Monoclonal Antibodies

Ralph A. Bradshaw, Edward A. Dennis

Nuclear Localization Of Growth Factors And Of Monoclonal Antibodies:

Nuclear Localization of Growth Factors and of Monoclonal Antibodies Ewa Rakowicz-Szulczynska,1993-10-13 Nuclear Localization of Growth Factors and of Monoclonal Antibodies focuses on how an additional class of chromatin receptors is directly involved in mediation of the action of growth factors on the gene regulation level The book describes a new intracellular pathway of growth factors and presents methods for identifying nuclear antigens with an epitopic homology of the cell surface antigens It teaches how to distinguish monoclonal antibodies that penetrate the cell and localize in the nucleus from those that act only on the cell surface New light is shed on the mechanisms of malignant transformation and new approaches to developing anti cancer and anti HIV drugs are covered The book will be important for oncologists biochemists cell biologists pharmaceutical researchers investigative pathologists neurochemists and immunologists

Signaling Pathways in Squamous Cancer Adam B. Glick,Carter Van Waes,2010-11-25 Squamous epithelia form the lining surface of tissues in contact with the environment the skin oral mucosa esophagus and respiratory tract the genital tract and several other specialized tissues These tissues are at highest risk for exposure to environmental carcinogens such as UV tobacco smoke and infectious agents Cancers that form in squamous epithelia are among the most common human solid tumors and have high morbidity and mortality These cancers include squamous cell carcinoma of the skin oral cancer head and neck and esophageal cancer certain lung cancers and cervical cancer We propose to organize the book so that the early chapters will focus on individual pathways and more specific mechanisms in both normal function and cancer while the later chapters will be more integrative and include overviews of biomarkers and therapeutic development This should increase interest for clinically oriented researchers All authors will be encouraged to provide a balanced review in addition to highlighting their own work

The FOS and JUN Families of Transcription Factors Peter E. Angel,Peter Herrlich,1994-09-29 This book introduces and analyzes the crucial role of AP 1 in cell growth proliferation differentiation and apoptosis AP 1 is the endpoint of several pathways of signal transduction including one that triggers cancerous growth The control of its activity is an issue of basic science cancer therapy and other diseases The chapters provide multiple viewpoints of the emerging data on AP 1 including its role as a factor regulating genes involved in the metastatic properties of cancer as a factor that interacts with viral gene products and as a part of the mechanism by which steroid and retinoic acid receptors function as anti inflammatory proteins

P. Malfertheiner, J.E. Dominguez-Munoz, H.-U. Schulz, Hans Lippert, 2012-12-06 A decade of diagnostic efforts in pancreatic diseases 1985 1995 The diagnostic access to the pancreas was revolutionized two decades ago by the advent of endoscopic retrograde pancreatography ultrasound and computed tomography The hidden organ was made visible by these diagnostic milestones In a process of slow but continuous evolution these imaging techniques have been further refined and complemented by nuclear magnetic resonance imaging and together they provide the standards on which therapeutic decisions depend Progress has also been made in the functional assessment of the pancreas in various conditions of disease such as acute pancreatitis chronic pancreatitis and cancer New developments in molecular biology also promise more significant achievements in the near future Ten years ago we gathered a panel of international specialists dedicated to the study and management of pancreatic diseases and invited them to share their experiences with the available diagnostic methods We have now repeated this process in order to review the past decade of progress in diagnostic procedures in pancreatic disease and to update the current state of expertise and stimulate further developments The concept of the meeting held in Magdeburg in December 1995 was to individually analyze the different diagnostic procedures and their specific use in the different disease conditions The rationale for the interpretation of diagnostic findings is derived from the understanding of basic physiological and pathophysiological events and the resultant morphological alterations CNS Cancer

Erwin G. Van Meir, 2009-08-15 Cancers of the central nervous system are among the most lethal of human neoplasms They are recalcitrant to even intensive multimodality therapies that include surgery radiotherapy and chemotherapy Moreover especially in children the consequences of these therapies can itself be devastating and involve serious cognitive and developmental disorders It is small wonder that such cancers have come under the intense scrutiny of each of the subspecialties of clinical care and investigation as well as attracting some of the best basic research scientists Their joint efforts are gradually peeling away the mysteries surrounding the genesis and progression of these tumors and inroads are being steadily made into understanding why they resist therapies This makes it an especially opportune time to assemble some of the best investigators in the field to review the state of the art in the various arenas that comprise the assault on

CNS tumors The breadth of this effort by the clinical and basic neuro oncology community is quite simply amazing To a large extent it evolves from the knowledge of the human genome and its regulation that has been hard won over the past two decades
