**Nuclear Science Abstracts**,1975    *Quantum Physics* Vladimir Zelevinsky,2010-12-28 This two volume set can be naturally divided into two semester courses and contains a full modern graduate course in quantum physics The idea is to teach graduate students how to practically use quantum physics and theory presenting the fundamental knowledge and gradually moving on to applications including atomic nuclear and solid state physics as well as modern subfields such as quantum chaos and quantum entanglement The book starts with basic quantum problems which do not require full quantum formalism but allow the student to gain the necessary experience and elements of quantum thinking Only then does the fundamental Schrodinger equation appear The author has included topics that are not usually covered in standard textbooks and has written the book in such a way that every topic contains varying layers of difficulty so that the instructor can decide where to stop Although supplementary sources are not required Further reading is given for each chapter including references to scientific journals and publications and a glossary is also provided Problems and solutions are integrated throughout the text    ERDA Energy Research Abstracts United States. Administration,1977    **Literature 1976, Part 2** S. Böhme,Ute Esser,Professor Dr. Walter Fricke,U. Güntzel-Lingner,I. Heinrich,D. Krahn,Dr. Lutz D. Schmadel,G. Zech,2013-04-18 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is de voted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals com pared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 18 contains literature published in 1976 and received before March 1 1977 some older liter ature which was received late and which is not recorded in earlier volumes is also included    **Information Circular** ,1968    **Helium** Carla W. Cherry,1968

*Information Circular* United States. Bureau of Mines,1968    *Theoretical Physics and Astrophysics* V.L. Ginzburg,2013-10-22 The aim of this book is to present on the one hand various topics in theoretical physics in depth especially topics related to electrodynamics and on the other hand to show how these topics find applications in various aspects of astrophysics The first text on theoretical physics and astrophysical applications it covers many recent advances including those in X ray ray and radio astronomy with comprehensive coverage of the literature    **Subject Catalog, 1981** Library of Congress,1981    Subject Guide to Books in Print ,1993    The New Encyclopædia Britannica: Macropædia ,1993 This encyclopedia includes a two volume index a 12 volume Micropædia Ready reference a 17 volume Macropædia

Knowledge in depth and the Propaedia     **Optics** J. P. Mathieu,2015-08-11 Optics Parts 1 and 2 covers electromagnetic optics and quantum optics The first part of the book examines the various of the important properties common to all electromagnetic radiation This part also studies electromagnetic waves electromagnetic optics of transparent isotropic and anisotropic media diffraction and two wave and multi wave interference The polarization states of light the velocity of light and the special theory of relativity are also examined in this part The second part is devoted to quantum optics specifically discussing the classical molecular theory of optical phenomena and the quantization of radiant energy and of energy in atoms This part also looks into topics such as wave mechanics atomic and molecular spectra and spectrometry This book will be beneficial to those interested in studying optics including students of physics     **Plasma Electrodynamics** A. I. Akhiezer,I. A. Akhiezer,R. V. Polovin,2017-03-22 Plasma Electrodynamics Volume 1 Linear Theory is a seven chapter book that begins with a description of the general methods of describing plasma particularly kinetic and hydrodynamic methods Chapter 2 discusses the linear theory of magneto hydrodynamic waves Chapter 3 describes the non linear magneto hydrodynamic waves both simple waves and shock waves Subsequent chapters explain the high frequency oscillations in an unmagnetized plasma oscillations of a plasma in a magnetic field and interaction between charged particle beams and a plasma The last chapter details the oscillations of a partially ionized plasma

A Survey of Hidden-Variables Theories F. J. Belinfante,2014-05-17 A Survey of Hidden Variables Theories is a three part book on the hidden variable theories referred in this book as theories of the first kind Part I reviews the motives in developing different types of hidden variables theories The quest for determinism led to theories of the first kind the quest for theories that look like causal theories when applied to spatially separated systems that interacted in the past led to theories of the second kind Parts II and III further describe the theories of the first kind and second kind respectively This book is written to make the literature on hidden variables comprehensible to those who are confused by the original papers with their controversies and to average reader of physics papers

The Nebular Variables John S. Glasby,2013-10-22 The Nebular Variables focuses on the nebular variables and their characteristics Discussions are organized by type of nebular variable namely RW Aurigae stars T Orionis stars T Tauri stars and peculiar nebular objects Topics range from light variations of the stars to their spectroscopic and physical characteristics spatial distribution interaction with nebulosity and evolutionary features This volume is divided into four sections and consists of 25 chapters the first of which provides general information on nebular variables including their stellar associations and their classification into three distinct groups RW Aurigae T Orionis and T Tauri variables These three groups of nebular variables are examined in more detail in the chapters that follow in terms of their light variations spatial distribution interaction with nebulosity and spectroscopic physical and evolutionary characteristics Visual and photoelectric light curves mass loss determined spectroscopically luminosities and stellar radii are considered The book also explores the possibility that some of the nebulae associated with certain nebular variables have evolved from a protoplanetary disc of

material consisting of both gas and solid matter Peculiar nebular variables such as the long period variable R Aquarii Herbig Haro objects symbiotic variables and infrared stars are analyzed as well This book is written primarily for students and teachers of astronomy    Mechanisms of Speech Recognition W. A. Ainsworth,2014-05-18 Mechanisms of Speech

Recognition explores the mechanisms underlying speech recognition Topics covered include the auditory system speech production auditory psychophysics speech synthesis and analysis vowel and consonant recognition and perception of prosodic features and of distorted speech Automatic speech recognition and models of speech recognition are also given consideration This volume consists of 11 chapters and begins with an overview of speech recognition communication and production More specifically it examines the way in which the organs of the vocal apparatus are employed to transform a message consisting of a string of linguistic units such as words or phonemes into a wave of continuous sounds which are recognized as speech The auditory system and its parts are then described from the ears to the organ of Corti and nerve cells The chapters that follow focus on the behavior of the hearing system the various techniques of analyzing speech sounds and speech synthesizers such as vocoders The mechanisms underlying the recognition of vowels and consonants are also described along with the physical parameters of the speech wave which signal the prosody of an utterance the effects of distortions in the speech wave on speech perception and tools used in automatic speech recognition The book concludes with an evaluation of models of speech recognition This book will be of interest to phoneticians linguists physiologists psychologists and physicists    *Gaseous Electronics and Gas Lasers* Blake E. Cherrington,2014-06-20 Gaseous Electronics and Gas Lasers deals with the fundamental principles and methods of analysis of weakly ionized gas discharges and gas lasers The emphasis is on processes occurring in gas discharges and the analytical methods used to calculate important process rates Detailed analyses of a variety of gas discharges are presented using atomic ionic and gas lasers as primary illustrations Comprised of 12 chapters this book begins with some initial categorization of gas discharge species and an overview of their interactions The discussion then turns to an elementary theory of a gas discharge inelastic collisions distribution functions and the Boltzmann equation and transport coefficients Subsequent chapters focus on the fluid equations electron density decay processes excited species atomic neutral gas lasers molecular gas lasers and ion lasers The important electron loss processes that determine the behavior of a plasma when the source and loss terms balance are also examined This monograph will be of value to graduate students practitioners and researchers in the fields of physics and engineering as well as to professionals interested in working with weakly ionized discharges
