Sanzone, 2012-12-06 More than 50 years ago in 1934 Chadwick and Goldhaber ChG 34 published a paper entitled A Nuclear Photo effect Disintegration of the Deuteron by γ Rays I in the introduction They noted By analogy with the excitation and ionisation of atoms by light one might expect that any complex nucleus should be excited or ionised that is disintegrated by γ rays of suitable energy and furthermore Heavy hydrogen was chosen as the element first to be examined because the deuteron has a small mass defect and also because it is the simplest of all nuclear systems and its properties are as important in nuclear theory as the hydrogen is in atomic theory Almost at the same time in 1935 the first theoretical paper on the photodisintegration of the deuteron entitled Quantum theory of the deuteron by Bethe and Peierls BeP 35 appeared It is not without significance that these two papers mark the beginning of photonuclear physics in general and emphasize in particular the special role the two body system has played in nuclear physics since then and still plays A steady flow of experimental and theoretical papers on deuteron photo disintegration and its inverse reaction $n + p \rightarrow d + \gamma$ shows the continuing interest in this fundamental process see fig 1.1 *Photodisintegration of Nuclei in the Giant Resonance Region* D.
