Nuclear Physics A Course Given By Enrico:

Nuclear Physics Enrico Fermi, 1950 This volume presents with some amplification the notes on the lectures on nuclear physics given by Enrico Fermi at the University of Chicago in 1949 The compilers of this publication may be warmly congratulated The scope of this course is amazing within 240 pages it ranges from the general properties of atomic nuclei and nuclear forces to mesons and cosmic rays and includes an account of fission and elementary pile theory The course addresses itself to experimenters rather than to specialists in nuclear theory although the latter will also greatly profit from its study on account of the sound emphasis laid everywhere on the experimental approach to problems There is a copious supply of problems Proceedings of the Physical Society Only a relatively few students are privileged to attend Professor Fermi's brilliant lectures at the University of Chicago it is therefore a distinct contribution to the followers of nuclear science that his lecture material has been systematically organized in a publication and made available to a much wider audience
