Progress in Nucleic Acid Research and Molecular Biology ,1976-07-09 Progress in Nucleic Acid Research and Molecular Biology **Proteins and Nucleic Acids** Abraham Marcus,2014-05-10 The Biochemistry of Plants A Comprehensive Treatise Volume 6 Proteins and Nucleic Acids provides information pertinent to the nucleic acids and the regulation of the expression of this information This book presents the processes by which the nucleic acids are finally expressed as proteins Organized into 14 chapters this volume begins with an overview of the overall structure of eukaryotic genomes with emphasis on higher plant DNA This text then examines the enzymes involved in the cleavage and degradation of DNA Other chapters provide a critical assessment of eukaryotic nucleic acid polymerases This book discusses as well some examples from plant mitochondrial systems The final chapter deals with two special areas of plant biology where the expression of the nucleic acids is seen in striking relief the formation of plant tumors and the growth and expression of plant viruses This book is a valuable resource for plant biochemists molecular biologists senior graduate students and research workers Cumulative Subject Index [to Methods in Enzymology] Volumes 1-30 Martha G. Dennis,Edward A. Dennis,1975 Biochemistry of Normal and Abnormal Epidermal Differentiation I. A. Bernstein,M. Seiji,1981-04-29 **University Bulletin** University of California (System),1974 Cell Biology A Comprehensive Treatise V4 David M. Prescott,2012-12-02 Cell Biology A Comprehensive Treatise Volume 4 Gene Expression Translation and the Behavior of Proteins discusses the translation of genetic information into proteins It also explains the activities and behaviors of proteins which is the final stage of gene expression This book opens with a discussion of the components and mechanism of the translational machinery their structures biogenesis and cellular levels It then explains the protein synthesis wherein each chapter focuses on one aspect of the detailed process Other topics covered in this book are the structure and function of cytoplasmic ribonucleoprotein complexes and the proteolytic cleavage in the posttranslational processing of proteins This text also covers the regulation of enzyme activity and the movement of material between nucleus and cytoplasm The last three chapters are more in depth discussions on protein synthesis intracellular transport regulation and secretion As with the other volumes of this book series readers will definitely benefit from the vast information provided in this book regarding protein its activities behaviors and synthesis Research Grants Index National Institutes of Health (U.S.). Division of Research Grants,1971 Techniques in Molecular Biology J.M. Walker,W. Gaastra,2012-12-06 The last few years have seen the rapid development of new methodology in the field of molecular biology New techniques have been regularly introduced and the sensitivity of older techniques greatly improved upon Developments in the field of genetic engineering in particular have contributed a wide range of new techniques The purpose of this book therefore is to introduce the reader to a selection of the more advanced analytical and preparative techniques which the editors consider to be frequently used by research workers in the field of molecular biology In choosing techniques for this book we have obviously had to be selective and for the sake of brevity a

knowledge of certain basic biochemical techniques and terminology has been assumed. However, since many areas of molecular biology are developing at a formidable rate and constantly generating new terminology, a glossary of terms has been included. The techniques chosen for this book are essentially based on those used in a series of workshops on techniques in molecular biology that have been held at The Hatfield Polytechnic in recent years. In choosing these chapters, we have taken into account many useful suggestions and observations made by participants at these workshops. Each chapter aims to describe both the theory and relevant practical details for a given technique and to identify both the potential and limitations of the technique. Each chapter is written by authors who regularly use the technique in their own laboratories.

Division and Segregation of Organelles Stephen A. Boffey, David Lloyd, 1988. These editors provide a stimulating survey of the ways in which mitochondria, plastids and other cellular organelles replicate. The orderly division and segregation of these organelles is essential for the survival of all eukaryotes and is therefore a topic of importance to a wide range of biologists from geneticists via physiologists to molecular biologists. The first part of the volume examines the mechanism, regulation and consequences of organelle segregation and division as studied in plant and animal cells. The second part compares the replication of DNA in eukaryote organelles with bacterial processes. Reviews range from a comparative study of DNA polymerases to the possible mechanisms ensuring DNA segregation.

Chemistry of Protein and Nucleic Acid Cross-Linking and Conjugation Shan S. Wong, David M. Jameson, 2011-10-10. Since the publication of the first edition of *Chemistry of Protein Conjugation and Cross Linking* in 1991, new cross linking reagents, notably multifunctional cross linkers, have been developed and synthesized. The completion of the human genome project has opened a new area for studying nucleic acid and protein interactions using nucleic acid cross [Research Awards Index](#), 1987.
