Crop Stress Management and Global Climate Change José Luis Araus, Gustavo A. Slafer, 2011 Agriculture has shaped our planet into the world we know but its continued success is threatened by changing weather patterns Climate change is a diverse multifactorial phenomenon and the agronomic strategies we employ to combat its effects need to be case specific with significant regional differences With two major sections the first explaining the challenges posed by climate change and the second reviewing the current research avenues employed this book combines detailed discussion of physiological plant responses with practical experience on crop stress management and breeding Using a number of illustrative case studies it discusses how the stresses resulting from climate change could be overcome by assessing measuring and predicting environmental changes and stresses and identifying opportunities for adapting to multifactorial change A global effort to combine climate change science with policy is desperately needed Climate change will continue to pose many challenges to agriculture in the future but by taking an integrative approach to predicting and adapting to change this book will inspire researchers to turn those challenges into opportunities Green Planet Stanley A Rice, 2009-01-28
