Programming for Computations - Python Svein Linge, Hans Petter Langtangen, 2019-10-30 This book is published open access under a CC BY 4.0 license This book presents computer programming as a key method for solving mathematical problems This second edition of the well received book has been extensively revised All code is now written in Python version 3.6 no longer version 2.7 In addition the two first chapters of the previous edition have been extended and split up into five new chapters thus expanding the introduction to programming from 50 to 150 pages Throughout the book the explanations provided are now more detailed previous examples have been modified and new sections examples and exercises have been added Also a number of small errors have been corrected The book was inspired by the Springer book TCSE 6 A Primer on Scientific Programming with Python by Langtangen but the style employed is more accessible and concise in keeping with the needs of engineering students The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows students to write simple programs for solving common mathematical problems with numerical methods in the context of engineering and science courses The emphasis is on generic algorithms clean program design the use of functions and automatic tests for verification

**Agent-Based and Individual-Based Modeling** Steven F. Railsback, Volker Grimm, 2012 Agent based modeling is a new technique for understanding how the dynamics of biological social and other complex systems arise from the characteristics and behaviors of the agents making up these systems This innovative textbook gives students and scientists the skills to design implement and analyze agent based models It starts with the fundamentals of modeling and provides an introduction to NetLogo an easy to use free and powerful software platform Nine chapters then each introduce an important modeling concept and show how to implement it using NetLogo The book goes on to present strategies for finding the right level of model complexity and developing theory for agent behavior and for analyzing and learning from models Agent Based and Individual Based Modeling features concise and accessible text numerous examples and exercises using small but scientific models The emphasis throughout is on analysis such as software testing theory development robustness analysis and understanding full models and on design issues like optimizing model structure and finding good parameter values The first hands on introduction to agent based modeling from conceptual design

to computer implementation to parameterization and analysis Provides an introduction to NetLogo with nine chapters introducing an important modeling concept and showing how to implement it using NetLogo Filled with examples and exercises with updates and supplementary materials at <http://www.railsback.grimm.abm.book.com> Designed for students and researchers across the biological and social sciences Written by leading practitioners Leading universities that have adopted this book include Amherst College Brigham Young University Carnegie Mellon University Cornell University Miami University Northwestern University Old Dominion University Portland State University Rhodes College Susquehanna University University College Dublin University of Arizona University of British Columbia University of Michigan University of South Florida University of Texas at Austin University of Virginia

*Naval Firepower* Norman Friedman, 2013-08-20 For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same Because the naval gun platform was itself in motion finding a firing solution was a significant problem made all the more difficult when gun sizes increased and fighting ranges lengthened and seemingly minor issues like wind velocity had to be factored in To speed up the process and eliminate human error navies sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman's terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems America's leading naval analyst explains not only how the technology shaped and was shaped by the tactics involved but analyses their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws conclusions that will surprise many readers He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar This is a book that everyone with a more than passing interest in twentieth century warships will want to read and nobody professionally involved with naval history can afford to miss

**Elementary Naval Ordnance and Gunnery** Hobart Cole Ramsey, 1918

**Regression Models for Categorical Dependent Variables Using Stata, Second Edition** J. Scott Long, Jeremy Freese, 2006 The goal of the book is to make easier to carry out the computations necessary for the full interpretation of regression nonlinear models for categorical outcomes using Stata

Medical Statistics Stephen J. Walters, Michael J. Campbell, David Machin, 2021-02-01 The 5th Edition of this popular introduction to statistics for the medical and health sciences has undergone a significant revision with several new chapters added and examples refreshed throughout the book Yet it retains its central philosophy to explain medical statistics with as little technical detail as possible making it accessible to a wide audience Helpful multiple choice exercises are included at the end of each chapter with answers provided at the end of the book Each analysis technique is carefully explained and the mathematics kept to a minimum Written in a style suitable

for statisticians and clinicians alike this edition features many real and original examples taken from the authors combined many years experience of designing and analysing clinical trials and teaching statistics Students of the health sciences such as medicine nursing dentistry physiotherapy occupational therapy and radiography should find the book useful with examples relevant to their disciplines The aim of training courses in medical statistics pertinent to these areas is not to turn the students into medical statisticians but rather to help them interpret the published scientific literature and appreciate how to design studies and analyse data arising from their own projects However the reader who is about to design their own study and collect analyse and report on their own data will benefit from a clearly written book on the subject which provides practical guidance to such issues The practical guidance provided by this book will be of use to professionals working in and or managing clinical trials in academic public health government and industry settings particularly medical statisticians clinicians trial co ordinators Its practical approach will appeal to applied statisticians and biomedical researchers in particular those in the biopharmaceutical industry medical and public health organisations

**The Naval Miscellany** Susan Rose,2020-11-26 This seventh volume of Naval Miscellany contains documents which range in date from the late thirteenth century to the Korean War They illustrate the many different ways in which the naval forces of the crown have served the realm Topics covered include the role of ships in campaigns against Scotland under Edward I and Edward VI the protection of the Iceland fishery in the days of the Commonwealth government and the operation of prize courts during the wars against France in the eighteenth century Moving on to the nineteenth century the supply of timber to the Royal Navy is examined while two contributions deal with surveying off the west coast of Africa and another prints a diary kept by a member of the Naval Brigade operating onshore in the Zulu War The most recent contributions deal with the origins and development of the Royal Australian Navy up to the 1950s Two more controversial subjects are also included the first gives more information about the storage of cordite on battle cruisers in 1916 and the battle of Jutland the second documents the relief of Admiral North from Gibraltar in 1940 There is something here for every enthusiast for naval history and for all students of the relevant periods
