Varga,1900 MONEY FROM TRASH Plastic waste has become a major environmental concern in today s world The excessive use of plastic and its improper disposal has led to the pollution of our oceans landfills and even our air However instead of viewing plastic waste as a problem we can see it as an opportunity With the right technology and processes plastic waste can be transformed into high quality secondary raw material which can be used in various industries This not only helps in reducing the amount of plastic waste in our environment but also creates a new source of income By turning trash into money we can incentivize individuals and businesses to properly manage their plastic waste This could potentially lead to a cleaner and more sustainable future for our planet Through the efficient processing of plastic waste we can not only tackle the issue of pollution but also create a circular economy where waste is seen as a valuable resource It is time for us to rethink our approach towards plastic waste and explore its potential as a secondary raw material **The Complete Photo**
