Quasi-Markets S.A. Denters, Oscar van Heffen, J. Huisman, P.J. Klok, 2013-06-29 It has taken a long time to make this book

Many initial drafts of the chapters published in this book were presented in November 2000 during a two day conference on Interactive governance towards a post parliamentary democracy held in Enschede The Netherlands The Netherlands Institute of Governance NIG sponsored the conference After this conference the organisers discussed the possibility of making a book on the basis of papers presented at this event In the end it was agreed that such a publication would indeed be worthwhile provided the initial papers were fundamentally revised Moreover it was agreed that also supplementary chapters should be included in order to strengthen the international comparative perspective On this basis authors of the conference papers chapters and envisioned new chapters were invited to re submit drafts The completion of the book however was unexpectedly halted by the tragic sudden death of our co editor and dear friend Oscar van Heffen In his lifetime he was the driving force behind this project Without his efforts insightful comments and helpful suggestions this book in its present form would never have been published As such we dedicate this volume to his memory the completion of the book being an honorary debt to our friend and his wife Mirjan

Power, Paradigms and Community Research, 1977 **The Connected City** Zachary P. Neal, 2012-08-06 The Connected City explores how thinking about networks helps make sense of modern cities what they are how they work and where they are headed Cities and urban life can be examined as networks and these urban networks can be examined at many different levels The book focuses on three levels of urban networks micro meso and macro These levels build upon one another and require distinctive analytical approaches that make it possible to consider different types of questions At one extreme micro urban networks focus on the networks that exist within cities like the social relationships among neighbors that generate a sense of community and belonging At the opposite extreme macro urban networks focus on networks between cities like the web of nonstop airline flights that make face to face business meetings possible This book contains three major sections organized by the level of analysis and scale of network Throughout these sections when a new methodological concept is introduced a separate method note provides a brief and accessible introduction to the practical issues of using networks in research What makes this book unique is that it synthesizes the insights and tools of the multiple scales of urban networks and integrates the theory and method of network analysis

Explorations in Structural Analysis (RLE Social Theory) Ronald Breiger, 2014-08-21 At a time when most of the innovative techniques in empirical sociology concern themselves with networks of relations among variables such as indices of occupational prestige education and income the central theme of this volume is that there is much substantive insight and analytical leverage to be gained from a conceptualization of social structure directly as regularities in the patterning of relations among concrete entities The view adopted here is that variate distributions measure selected consequences of structural pattern of the actual connections among individuals or organizations and as such they are useful indicators of questions to be asked in analyzing social structures directly but they are neither descriptions nor analyses of the structure itself
