Nature and the Environment in Amish Life David L. McConnell, Marilyn D. Loveless, 2018-11-01 The Amish relationship to the environment is much more complicated than you might think The pastoral image of Amish communities living simply and in touch with the land strikes a deep chord with many Americans Environmentalists have lauded the Amish as iconic models for a way of life that is local self sufficient and in harmony with nature But the Amish themselves do not always embrace their ecological reputation and critics have long questioned the portrayal of the Amish as models of environmental stewardship In *Nature and the Environment in Amish Life* David L McConnell and Marilyn D Loveless examine how this prevailing notion of the environmentally conscious Amish fits with the changing realities of their lives Drawing on 150 interviews conducted over the

course of 7 years as well as a survey of household resource use among Amish and non Amish people they explore how the Amish understand nature in their daily lives and how their actions impact the natural world Arguing that there is considerable diversity in Amish engagements with nature at home at school at work and outdoors McConnell and Loveless show how the Amish response to regional and global environmental issues such as watershed pollution and climate change reveals their deep skepticism of environmentalists They also demonstrate that Amish households are not uniformly lower in resource use compared to their rural non Amish neighbors though aspects of their home economy are relatively self sufficient The first comprehensive study of Amish understandings of the natural world this compelling book complicates the image of the Amish and provides a more realistic understanding of the Amish relationship with the environment **Horseback**

and Natural Resource Development in the Western Highlands of Cameroon. Issues in Natural Resource Management Cornelius Mbifung Lambi,Emmanuel Neba Ndenecho,2010 The densely populated Bamenda Highlands of Cameroon remains one of the regions with the greatest land degradation problems in the country Factors responsible for this include climate change the hilly nature or topographic layout of the land and human interference through overgrazing destructive agricultural practices and the impact of deforestation This detailed study of resource management and its ecological challenges in the Bamenda Highlands stresses an important link between falling food output and soil deterioration While most areas in this predominantly agricultural region enjoy food abundance the inhabitants of high density infertile rugged mountainous areas are forced to resort to double cropping and intensified land exploitation that leave little room for soil regeneration The population problem in relation to land degradation is infinitely more complicated than the region s sheer ability to produce enough food supply The authors make a strong case for a delicate balance between human agency and environmental protection in this highly populated and physically challenging region where land is a precious resource and land conflicts are common **Equestrian Studies** Myron J.
