Hurt,2020-03-03 A synthesis of the agricultural history of the Green Revolution The Green Revolution was devised to increase agricultural production worldwide particularly in the developing world Agriculturalists employed anhydrous ammonia and other fertilizing agents mechanical tilling hybridized seeds pesticides herbicides and a multitude of other techniques to increase yields and feed a mushrooming human population that would otherwise suffer starvation as the world's food supply dwindled In *The Green Revolution in the Global South* Science Politics and Unintended Consequences R. Douglas Hurt demonstrates that the Green Revolution did not turn out as neatly as scientists predicted When its methods and products were imported to places like Indonesia and Nigeria or even replicated indigenously the result was a tumultuous impact on a society's functioning A range of factors including cultural practices ethnic and religious barriers cost and availability of new technologies climate rainfall and aridity soil quality the scale of landholdings political policies and opportunism the rise of industrial farms civil unrest indigenous diseases and corruption entered into the Green Revolution calculus producing a series of unintended consequences that varied from place to place As the Green Revolution played out over time these consequences rippled throughout societies affecting environments economies political structures and countless human lives Analyzing change over time almost decade by decade Hurt shows that the Green Revolution was driven by the state as well as science Rather than acknowledge the vast problems with the Green Revolution or explore other models Hurt argues scientists and political leaders doubled down and repeated the same missteps in the name of humanity and food security In tracing the permutations of modern science's impact on international agricultural systems Hurt documents how beyond increasing yields the Green Revolution affected social orders politics and lifestyles in every place its methods were applied usually far more than once **Small Farmer Development in Asia and the Pacific** N. Randhawa,K. V. Sundaram,1990-01-01 **The Oxford Handbook of Agricultural History** Jeannie M. Wayne,2024 Agricultural history has enjoyed a rebirth in recent years in part because the agricultural enterprise promotes economic and cultural connections in an era that has become ever more globally focused but also because of agriculture's potential to lead to conflicts over precious resources The Oxford Handbook of Agricultural History reflects this rebirth and examines the wide reaching implications of agricultural issues featuring essays that touch on the green revolution the development of the Atlantic slave plantation the agricultural impact of the American Civil War the rise of scientific and corporate agriculture and

modern exploitation of agricultural labor **Environmental Management in the Tropics** Randall Baker, 2021-06-24 The arrival of western science and economic interests to the tropics has dramatically changed the tropical environment and its ecology *Environmental Management in the Tropics* discusses the ecology of the tropics and examines how it is different from the temperate zone where western science evolved The author discusses how native people traditionally subsisted in different ecological zones of the tropics and how they rationalized their relationship The author also takes a critical look at the impact of colonialism in the tropics and how it changed traditional cultures and their relationship with the environment The current clash between economics and ecology in the tropics is explored in depth According to the author we are now able to draw a line in the sand and illustrate the consequences of continuing current practices *Environmental Management in the Tropics* shows how this situation developed and discusses how the two opposing concepts must be brought back into harmony The book is one of the few studies to take a truly interdisciplinary approach combining the serious inevitabilities of natural science with the variables of history culture politics and economics It gives us a new respect for the past and tradition of the tropics and clearly spells out why dramatic changes must occur to prevent further degradation of the tropical environment *Environmental Management in the Tropics* is an important reference for ecologists conservationists scientists researchers environmental consultants land managers and developers members of the world regulatory community and anyone working on projects in tropical regions *Natural Resource Policymaking in Developing Countries* William Ascher, Robert G. Healy, 1990 Drawing on case studies developed over a two year period 1987-1989 by Fellows in the Program in International Development Policy at Duke University including experienced representatives from developing countries the World Bank and scholars the authors integrate the growing interest in environmental protection and resource conservation into the existing body of knowledge about the political economy of developing countries This book is about the links that tie resource use environmental quality and economic development and the way in which those links are affected by the distribution of income and resource ownership The links may be relatively simple as in the case of peasant farmers too poor to conserve resources for the future and with nothing to gain from sound environmental practices Or they may be very complex as the authors find when they demonstrate how achievement of higher incomes by the rich can increase environmentally destructive behavior by the poor Many of the links in some way involve rural land use whether for agriculture or forestry *Natural Resource Policymaking in Developing Countries* argues that the policies that matter are not merely those dealing with resources and the environment but a much broader set that includes income distribution and asset ownership *Water Policy and Governance in South Asia* M. Anwar Hossen, 2017-03-16 Dr Hossen carried out an exceptional program of research in Bangladesh which focused on water governance in relation to human rights international water law and environmental sustainability His major argument is that the eco agricultural system encounters major disruptions due to a number of factors including regional hydropolitics and neoliberal and highly centralized approaches to water

resource management that follow the principles of ecocracy In this context Dr Hossen explores three major questions i How can local ecological knowledge be incorporated into national water policy ii What strategies and reforms are required at the international watershed governance level and iii How can human rights principles including the principle of water as a human right be used to formulate more effective water policy and governance principles To answer these questions Dr Hossen explores the effects of regional hydropolitics on water management focusing on three large engineering projects the Farakka Barrage built by India on the Ganges River and the Ganges Kobodak GK and Gorai River Restoration GRR Projects in Bangladesh This analysis is based on his research into local knowledge and farming practices during a year of fieldwork in 2011 12 focus group discussions in depth case studies and social survey methods In addition to this primary data he looks at extensive secondary documents from the government of Bangladesh pertaining to water management agricultural modernization and institutional structures The arguments herein are applicable particularly to the Ganges Brahmaputra Basin countries in South Asia but also to the river basins of other parts of the world

The Nonfarm Sector and Rural Development Nurul Islam, 1997 In most developing countries the rural labor force is growing rapidly but rural employment opportunities are dwindling This paper brings together empirical evidence on the nonfarm sector and analyzes policies for its future development It examines the linkages between the farm and nonfarm sectors and between the nonfarm sector and urban enterprises and considers ways the government can promote rural employment
