Nature Is Culture Indigenous Knowledge And Sociocultural Aspects Of Tree And:

Nature is Culture Klaus Seeland,1997 The so called virgin forests of the world owe much to their symbiotic relationship with the Indigenous peoples who live in and on the margins of them This startling message will have far reaching implications for all concerned with conservation Nature, Culture, and Big Old Trees Kit Anderson,2010-06-04 Big old trees inspire our respect and even affection The poet Walt Whitman celebrated a Louisiana live oak that was solitary in a wide flat space Uttering joyous leaves all its life without a friend a lover near Groves and alleys of live oaks remain as distinctive landscape features on Louisiana s antebellum plantations while massive individuals still cast their shade over churches graveyards parks and roads Cajuns have adopted the Evangeline Oak as one of their symbols And the attachment that Louisianians feel for live oaks is equaled by that of Guatemalans for ceibas the national tree of Guatemala Long before Europeans came to the Americas the ceiba tallest of all native species was the Mayan world tree the center of the universe Today many ceibas remain as centers of Guatemalan towns spreading their branches over the central plaza and marketplace In this compelling book Kit Anderson creates a vibrant portrait of the relationship between people and trees in Louisiana and Guatemala Traveling in both regions she examined and photographed many old live oaks and ceibas and collected the stories and symbolism that have grown up around them She describes who planted the trees and why how the trees have survived through many human generations and the rich meanings they hold for people today Anderson also recounts the natural history of live oaks and ceibas to show what human use of the landscape has meant for the trees This broad perspective blending cultural geography and natural history adds a new dimension to our understanding of how big old trees and the places they help create become deeply meaningful even sacred for human beings **Nature is Culture** Klaus Seeland,1997 The so called virgin forests of the world owe much to their symbiotic relationship with the Indigenous peoples who live in and on the margins of them This startling message will have far reaching implications for all concerned with conservation *The Social Life of Trees* Laura Rival,2021-03-10 The passionate response of the British public to the Newbury Bypass is a revealing measure of how strongly people feel about trees and the environment Similarly in the United States the giant sequoia of California is an enduring national symbol that inspires intense feelings As rainforests are sacrificed to the interests of multi national corporations and traditional ways of life disappear the status of forests the cultural significance of trees and the impact of conservation policies are subjects that have inspired intense engagement Why do people feel so strongly about trees With this explosion of interest in environmental issues a serious study of what trees mean to people has long been overdue This interdisciplinary book responds to this need by providing the first cross cultural analysis of tree symbolism Drawing on rich case studies contributors explore the processes through which trees are used as metaphors of identity and continuity Political struggles over forest resources feature prominently and the perceptions of trees in various cultures provide telling insights into the ways in which human societies conceptualize nature As well as being a major

contribution to the field of symbolic anthropology this comprehensive study will be essential reading for students in a wide range of courses and for anyone with a keen interest in the politics of ecology the occult and neo paganism and the history and sociology of environmentalism in its widest sense

Chinese Environmental Ethics Mayfair Yang, 2021-11-08 An interdisciplinary collection in the new field of environmental humanities this volume brings together Chinese environmental ethics religious ontology and religious practice to explore how traditional Chinese religio environmental ethics are actually put into social practice both in China's past and present It also examines how Chinese religious teachings offer a wealth of resources to the environmental project of forging new ontologies for humans co existing with other living beings Different chapters examine how Buddhist ontology avoids anthropocentrism

fengshui Chinese geomancy can help protect the landscape from economic development popular religion organizes tree planting ancient dream interpretation practices avoided constructing the possessive individual subjectivity of modern consumerism Buddhist rituals and ethics promoted compassion for animals and modern recycling Confucian ancestor rituals and tombs have deterred industrial expansion and also how Daoism's potential role to deter desertification in northern China was stymied by state operations in contemporary China A significant advance in the field of Chinese environmental anthropology the outstanding scholars in this volume provide a unique and much needed contribution to the scholarship on China and the environment Methods and Approaches in Forest History Mauro Agnoletti, Steven Anderson, 2000 A companion to Forest History International Studies on Socioeconomic and Forest Ecosystem Change which includes over 20 papers from the same conference held in Florence in 1998 This volume focuses on the different approaches and methods adopted in the study of forest history The interdisciplinary nature of these studies is emphasized bringing in the different perspectives of anthropologists botanists ecologists foresters historians geneticists and geographers This volume demonstrates the rich diversity of approaches and methods to forest history **Shifting Cultivation and Environmental Change** Malcolm F. Cairns, 2015-01-09 Shifting cultivation is one of the oldest forms of subsistence agriculture and is still practised by millions of poor people in the tropics Typically it involves clearing land often forest for the growing of crops for a few years and then moving on to new sites leaving the earlier ground fallow to regain its soil fertility This book brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Some critics have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However the book shows that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment and local communities The book focuses on successful agricultural strategies of upland farmers particularly in south and south east Asia and presents over 50 contributions by scholars from around the world and from various disciplines including agricultural economics ecology and anthropology It is a sequel to the much praised *Voices from the Forest Integrating Indigenous Knowledge into Sustainable Upland Farming* RFF Press 2007 but all chapters are completely new and there is a greater emphasis on the contemporary challenges of climate change and biodiversity conservation
