Amit Goswami

Nature Of The Moment:

The Concept of Nature Alfred North Whitehead, 2007-01-01 Hailed as one of the most valuable books on the relation of philosophy and science Alfred North Whitehead's *The Concept of Nature* first published in 1920 was an important contribution to the development of philosophic naturalism Examining the fundamental problems of substance space and time Whitehead assesses the impact of Einstein's theories as well as the then recent findings of modern physics on the concept of nature For students and teachers of natural philosophy this is essential reading English mathematician and philosopher ALFRED NORTH WHITEHEAD 1861-1947 contributed significantly to 20th century logic and metaphysics With Bertrand Russell he cowrote the landmark *Principia Mathematica* and also authored *An Inquiry Concerning the Principles of Natural Knowledge* *The Function of Reason* and *Process and Reality* **The Nature of the Moment** Valentine Ackland, 1974

Relativity and the Nature of Spacetime Vesselin Petkov, 2009-06-23 This expanded second edition of *Relativity and the Nature of Spacetime* contains several major changes and a number of additions to different chapters Two chapters Chaps 6 and 7 which discussed two specific groups of arguments against the reality of spacetime have been transformed into appendices A and B Two new chapters Chaps 6 and 10 have been added Chapter 6 entitled *Why Is the Issue of the Nature of Spacetime So Important* elaborates on what was Sect 5.6 of the first edition and addresses some recent work on the nature of spacetime for example the growing or evolving block universe model of the world which has recently been revived by several physicists as what appears to be the last remaining alternative to the Minkowski absolute four dimensional world after it had become an undeniable fact that three dimensionalism or presentism contradicts the relativistic experimental evidence Chapter 10 entitled *Spacetime and the Nature of Quantum Objects* and based on what used to be Sects 6.2 and 6.3 in the first edition explores the implications of the issue of the nature of spacetime for quantum physics in order to see whether it can provide some insight into the nature of quantum objects Two new sections have been included namely Sect 5.6 entitled *Relativization of Existence and Observers in General Relativity* and Sect 7.6 titled *Probing the Anisotropic Velocity of Light by a Terrestrial Experiment* **Truthful Sayings** Siyanda Mquqwana, 2011-12-20 This is a book about how to live according to your nature respecting Nature others and yourself while living in the moment The author takes on the monumental task of defining life consciousness enlightenment and the elusive fountain of youth The reader is taken on an introspective and philosophical journey within during which age old questions are answered in a simple and easy to understand manner This book shines a light on the individual and explores the power of the right intention as represented in the right thought and heard in the right speech before it is seen in the right action that shapes not just the individual but also the world The role of individual consciousness in shaping universal consciousness is touched upon and an easy to follow step by step approach is provided such that the reader is not only provided with the what and the how but also with the why as some questions are left unanswered in a tantalizing manner that leaves you searching for more **The Physicists' View of Nature, Part 1** Amit

Goswami,2012-12-06 This book is designed as a textbook for students who need to fulfil their science requirements Part I explores classical physics from its beginnings with Descartes Galileo Kepler and Newton to the relativity theories of Einstein Special emphasis is given to the development of the objective materialist and deterministic worldview of classical physics The influence of Newtonian physics on other fields of science and on society is emphasized Finally some of the problems with the worldview of classical physics are discussed and a preview of quantum physics is given **A Korean Theology of Human Nature** Jung Sun Oh,2005-01-31 This remarkable study articulates a Korean Confucian Christian theory of human nature theory of justification sanctification and salvation by means of a reformed concept of filial piety The book investigates in depth the theological anthropology of Robert C Neville and the inclusive humanism of Tu Wei ming Neville and Tu represent contemporary Christian and Confucian approaches to religious anthropology Furthermore they have engaged in an extended and productive dialogical encounter on the themes of comparative thought and religious renewal in Asia and North America This book argues that Neville s and Tu s insights into human nature have great relevance for a comparative contemporary Korean theology by focusing on the role of a reformed version of filial piety as a new component of Korean theology The articulation of filial piety as a potential key of contemporary Korean theology is an example of creative appropriation of a Confucian theme of the Christian praxis of sanctification and ultimately the soteriology of divine grace and transformation This study construes human nature to be such that any living theology will reflect the creative engagement of Christian theologians as public intellectuals in search of the articulation of the gospel *Nature of the Carbides of Iron* Lawrence John Edward Hofer,1966 The Epochal Nature of Process in Whitehead's Metaphysics F. Bradford Wallack,1980-06-30 While my book attempts to reflect the full range of scholarly debate I have also attempted to make it useful to anyone interested in Whitehead To this end I have introduced the Whiteheadian terms one by one explaining each in the light of my interpretation and I have used examples wherever possible I try to show that Whitehead intended his philosophy have a place in our lives by reshaping our common conceptions and that he did not intend it to be relegated to purely abstract or esoteric application F Bradford Wallack The twentieth century has seen the greatest innovations in philosophical cosmology since Newton and Descartes and Alfred North Whitehead was the first and greatest of the philosophers to work out these innovations in systematic ways In a book that will be controversial in the philosophical community F Bradford Wallack argues that interpretations widely accepted by Whiteheadians need revaluation because these interpretations are based on materialist and substantialist assumptions that Whitehead sought to replace Specifically she proposes a thorough revision of accepted interpretations of Whitehead s concept of the actual entity Wallack then elucidates Whitehead s ideas in order of their increasing dependence upon other basic Whiteheadian terms to complete the study of Whiteheadian time and to clarify its purpose within the cosmology of Process and Reality Whitehead s philosophy then emerges as more intelligible and cohesive than is generally believed **Tibetan Buddhist Philosophy of Mind and Nature** Douglas S. Duckworth,2019

Tibetan Buddhist Philosophy of Mind and Nature is a philosophical overview of Tibetan Buddhist thought Charting the different ways Buddhist traditions in Tibet configure the relationship between Madhyamaka and Mind Only Duckworth shows how these configurations inform the shape of distinct contemplative practices *The Nature of Things* Anthony M. Quinton, 2019-03-07 Originally published in 1973 In this systematic treatise Anthony Quinton examines the concept of substance a philosophical refinement of the everyday notion of a thing Four distinct but not unconnected problems about substance are identified what accounts for the individuality of a thing what confers identity on a thing what is the relation between a thing and its appearances and what kind of thing is fundamental in the sense that its existence is logically independent of that of any other kind of thing In Part 1 the first two problems are discussed while in Part 2 the third and fourth are considered Part 3 examines four kinds of thing that have been commonly held to be in some way non material abstract entities the un observable entities of scientific theory minds and their states and finally values The author argues that theoretical entities and mental states are in fact material He gives a linguistic account of universals and necessary truths and advances a naturalistic theory of value
