Neal E Miller:

Neal E. Miller Neal Elgar Miller,1971 *Conflict, Displacements, Learned Drives and Theory* Neal E. Miller,2008-07-01 Continues Learning motivation and their physiological mechanisms Neal E Miller New Brunswick Aldine Transaction 2007 *Health Psychology* George C. Stone,1987-05-18 In 1976 a small group of psychologists urged that more research be done on aspects of health and health care outside the domain of mental health Today health psychology is one of the fastest growing divisions of the American Psychological Association journals and textbooks in increasing numbers are another signal of rapid growth in this field **Learning, Motivation, and Their Physiological Mechanisms** Neal E. Miller, Neal E Miller s pioneering work in experimental psychology has earned him worldwide respect This second in a two volume collection of his work brings together forty three of Miller s most important and representative essays on learning motivation and their physiological mechanisms They were selected on the basis of their current relevance and their historical significance at the time they were published In order to emphasize the main themes essays on a given topic have been grouped together Learning Motivation and Their Physiological Mechanisms begins when the author first discovered the thrill of designing and executing experiments to get clear cut answers concerning the behavior of children and of rats The first study was one of the earliest ones on the behavioral effects of the recently synthesized male hormone testosterone The second was one of the earliest studies demonstrating the value of using a variety of behavioral techniques to investigate the motivational effects of a physiological intervention The next studies investigated the satisfying and rewarding effects of food or water in the stomach versus in the mouth and the thirst inducing and reducing effects of hyper and hypotonic solutions respectively injected into the brain The last study describes a technique devised for extending the analysis of the mechanism of hunger to the effects of humoral factors in the blood The study is completed with an examination of trial and error learning that was motivated by direct electrical stimulation of the brain and rewarded by the termination of such stimulation Other studies show that the stimulation via such electrodes not only elicits eating but also has the principal motivational characteristics of normal hunger The conclusion deals with a series of experiments that overthrows strong traditional beliefs by proving that glandular and visceral responses mediated by the autonomic nervous system are subject to instrumental learning which can be made quite specific Neal E Miller 1909 2002 was a professor of psychology at Yale University and professor and head of a laboratory of Physiological Psychology at the Rockefeller University He is a past president of the American Psychological Association an elected honorary fellow of the British Psychological Society and chairman of the National Research Council Committee on Brain Sciences He is co author of four books and author of many articles **Neal E. Miller: Selected papers on conflict, displacement, learned drives and theory** Neal Elgar Miller,1971

An Introduction to Theories of Learning Julio J. Ramirez, Matthew H. Olson, 2020-02-07. Since its first edition, *An Introduction to Theories of Learning* has provided a uniquely sweeping review of the major learning theories from the 20th century that profoundly influenced the field of psychology. In this tenth edition, the authors present further experimental evidence that tests many of the fundamental ideas presented in these classic theories as well as explore many of the advances in psychological science and neuroscience that have yielded greater insight into the processes that underlie learning in human beings and animals. The four main goals of this text are to define learning and to show how the learning process is studied; Chapters 1 and 2 to place learning theory in historical perspective; Chapter 3 and to present essential features of the major theories of learning with implications for educational practices; Chapters 4 through 16. The authors retained the best features of earlier editions while making revisions that reflect current research and scholarship, including coverage of active learning and the testing effect, information for problem solving in ravens data illustrating the neurobiological basis of the cognitive map and spatial learning, new research on brain plasticity and its role in learning as well as the impact of poverty on brain and cognitive development, and new evidence that challenges the notion of learning styles. Complete with chapter summaries, discussion questions, and a glossary, this text is essential reading for theories of learning and applied cognitive psychology courses. See Support Material below for new online resources. Instructor resources include PowerPoint slides and a testbank containing over 500 questions in both Microsoft Word and GIFT file formats. Student resources include chapter summaries, discussion questions, and a glossary of key terms.
