Celia Deane-Drummond

Passion For Dna Genes Genomes And Society:

A Passion for DNA James D. Watson, 2001 In 1953 two young and unknown scientists James Watson and Francis Crick sparked a worldwide revolution with their discovery of the molecular composition of DNA In this collection of outspoken and topical essays speeches and reports Watson offers his unique insight into the advance of molecular genetics the prospect of curing cancer over the next decade how human genetic knowledge is likely to be used particularly in relation to cloning and genetically modified food as well as shedding light on his early life and career

A Passion for DNA James Dewey Watson, 2000 The Road to Stockholm István Hargittai, 2002 The Nobel Prize is by far the highest recognition a scientist may receive and the only one with which the general public is familiar Its prestige has reached improbable heights At the same time a lot of myth surrounds the Nobel Prize and this is compounded by the fact that people tend to view scientists with some bewilderment This book introduces the process of selection of the laureates discusses the ingredients for scientific discovery and for getting recognition It reviews the decisive moments of scientific careers en route to the Nobel Prize points to characteristic features of the laureates the importance of mentors and venues in scientific careers and other components of success It also covers some discoverers and discoveries for whom and for which the Nobel Prize never materialized Whereas there is no general recipe for receiving the Nobel Prize there are common features of successful scientific careers The book reveals some information about the scientists lives and careers that may guide other scientists in increasing their chances of becoming more effective and better recognized players although it is not expected to help anyone to receive the Nobel Prize For the general reader The Road to Stockholm reveals the human face of scientists and the human side of their endeavours The Nobel Prize has served as inspiration for scientists and the general public for a hundred years this book discusses its problems and celebrates its triumphs

Genetics and Christian Ethics Celia Deane-Drummond, 2006 In the immediate future we are likely to witness significant developments in human genetic science It is therefore of critical importance that Christian ethics engages with the genetics debate since it affects not just the way we perceive ourselves and the natural world but also has wider implications for our society This book considers ethical issues arising out of specific practices in human genetics including genetic screening gene patenting gene therapy genetic counselling as well as feminist concerns Genetics and Christian Ethics argues for a particular theo ethical approach that derives from a modified version of virtue ethics drawing particularly on a Thomistic understanding of the virtues especially prudence or practical wisdom and justice The book demonstrates that a theological voice is highly relevant to contested ethical debates about genetics

Critical Thinking in Psychology Robert J. Sternberg, Diane F. Halpern, 2020-01-16 Good scientific research depends on critical thinking at least as much as factual knowledge psychology is no exception to this rule And yet despite the importance of critical thinking psychology students are rarely taught how to think critically about the theories methods and concepts they must use This book shows students and researchers how to think critically about key topics such as experimental

research statistical inference case studies logical fallacies and ethical judgments Using updated research findings and new insights this volume provides a comprehensive overview of what critical thinking is and how to teach it in psychology Written by leading experts in critical thinking in psychology each chapter contains useful pedagogical features such as critical thinking questions brief summaries and definitions of key terms It also supplies descriptions of each chapter author s critical thinking experience which evidences how critical thinking has made a difference to facilitating career development

Brilliant Blunders Mario Livio,2014-05-27 Drawing on the lives of five great scientists Charles Darwin William Thomson Lord Kelvin Linus Pauling Fred Hoyle and Albert Einstein scientist author Mario Livio shows how even the greatest scientists made major mistakes and how science built on these errors to achieve breakthroughs especially into the evolution of life and the universe

The Annotated and Illustrated Double Helix James D. Watson,Alexander Gann,2012-11-06 In his 1968 memoir *The Double Helix* Readers Union 1969 the brash young scientist James Watson chronicled the drama of the race to identify the structure of DNA a discovery that would usher in the era of modern molecular biology After half a century the implications of the double helix keep rippling outward the tools of molecular biology have forever transformed the life sciences and medicine *The Annotated and Illustrated Double Helix* adds new richness to the account of the momentous events that led the charge

The Disability Bioethics Reader Joel Michael Reynolds,Christine Wieseler,2022-05-30 The Disability Bioethics Reader is the first introduction to the field of bioethics presented through the lens of critical disability studies and the philosophy of disability Introductory and advanced textbooks in bioethics focus almost entirely on issues that disproportionately affect disabled people and that centrally deal with becoming or being disabled However such textbooks typically omit critical philosophical reflection on disability Directly addressing this omission this volume includes 36 chapters most appearing here for the first time that cover key areas pertaining to disability bioethics such as state of the field analyses of modern medicine bioethics and disability theory health disease and the philosophy of medicine issues at the edge and end of life including physician aid in dying brain death and minimally conscious states enhancement and biomedical technology invisible disabilities chronic pain and chronic illness implicit bias and epistemic injustice in health care disability quality of life and well being race disability and healthcare justice connections between disability theory and aging trans and fat studies prenatal testing abortion and reproductive justice The Disability Bioethics Reader unlike traditional bioethics textbooks also engages with decades of empirical and theoretical scholarship in disability studies scholarship that spans the social sciences and humanities and gives serious consideration to the history of disability activism

Born and Made Sarah Franklin,Celia Roberts,2006-11-19 *Born and Made* examines the case of preimplantation genetic diagnosis PGD the procedure used to prevent serious genetic disease by embryo selection and the so called designer baby method It shows that far from being a runaway technology the regulation of PGD provides an example of precaution and restraint

Rúa, 2021-08-10 WINNER D Scott Palmer Prize for Best Edited Collection given by the New England Council of Latin American Studies Introduces new approaches theoretical trends and understudied topics in Latinx Studies This groundbreaking work offers a multidisciplinary social science oriented perspective on Latinx studies including the social histories and contemporary lives of a diverse range of Latina and Latino populations Editors Ana Y Ramos Zayas and M rida M R a have crafted an anthology that is unique in both form and content The book combines previously published canonical pieces with original cutting edge works created for this volume The sections of the text are arranged thematically as critical dialogues each with a brief preface that provides context and a conceptual direction for the scholarly conversation that ensues The editors frame the volume around the humanistic social sciences using the term to highlight the historical and social contexts under which expressive cultural forms and archival records are created *Critical Dialogues in Latinx Studies* masterfully sheds light on the diversity and complexity of the everyday lives of Latinx populations the political economic structures that shape enduring racialization and cultural stereotyping and the continuing efforts to carve out new lives as diasporic transnational global and colonial subjects *Medicine after the Holocaust* S. Rubinfeld, 2010-01-04 Rubinfeld and the contributors to this collection posit that German physicians betrayed the Hippocratic Oath when they chose knowledge over wisdom the state over the individual a f hrer over God and personal gain over professional ethics **Genetic Discrimination and Genetic Privacy in a Comparative Perspective** Janneke H. Gerards, A. W. Heringa, Heleen L. Janssen, 2005 During the last decades a better understanding of the influence of genetic factors on the onset of illness and disease has evolved Unfortunately however the information revealed by genetic tests is not always accurate and reliable and its probabilistic value is often limited Throughout the world the possibility of genetic testing and the availability of individual

genetic information have therefore caused increasing social concern especially since many actors outside the medical profession such as health and life insurance companies and employers have shown a growing interest in individual genetic information In many states as well as on the international level there is an ongoing debate about the balance that should be struck between the protection of the individual against misuse of genetic information and the interests of social actors and genetic research institutes and about the policy options that are at hand to reduce the risks that are created by the availability of genetic information This book offers some clarity as to the choices that have been made in various legal systems both national and international with respect to the regulation of genetic information On the basis of an elaborate analysis of relevant legislation policy approaches and case law in the United States the various European states and on the international level the book aims to provide insight in the issues that must be deemed relevant in considering and eventually introducing regulative measures with respect to genetic information

A Life Decoded J. Craig Venter, 2007-10-18 The triumphant memoir of the man behind one of the greatest feats in scientific history Of all the scientific achievements of the past century perhaps none can match the deciphering of the human genetic code both for its technical brilliance and for its implications for our future In *A Life Decoded* J Craig Venter traces his rise from an uninspired student to one of the most fascinating and controversial figures in science today Here Venter relates the unparalleled drama of the quest to decode the human genome a goal he predicted he could achieve years earlier and more cheaply than the government sponsored Human Genome Project and one that he fulfilled in 2001 A thrilling story of detection *A Life Decoded* is also a revealing and often troubling look at how science is practiced today

Brave New World? Celia Deane-Drummond, 2003-11-01 One of the key issues facing us in the next millennium is the ability to manipulate the genetics of living organisms The possibility of manipulating human genetics raises many theological ethical and socio political issues These include specific decisions about whether the technology will be developed how it will be applied and more general questions about the technical manipulation of natural processes From a theological perspective the human genome project not only challenges particular doctrines such as that of creation eschatology and anthropology but also raises particular issues of social justice and medical ethics The purpose of this book is to bring together the collective expertise of theologians scientists and social scientists in order to provide a forum for critique and public debate focused on the human genome project It is hoped that the results presented in this book offer a sophisticated theological and ethical response

Life Writing Meg Jensen, Jane Jordan, 2009-03-26 In our age self publishing self broadcasting and telling stories about our own lives and the lives of others are all pervasive This is also the age of the witness the age of testimony in which first hand accounts personal experience life change and evolution are valued for good or ill over distanced reflection What are we to make of all this telling of lives The essays collected in *Life Writing The Spirit of the Age and the State of the Art* from writers and academics associated with the Centre for Life Narrative Studies at Kingston University in London begin to address this very question and in doing so demonstrate the

fluidity and diversity of life writing itself The remit of the Centre for Life Narratives is to rise to the challenge poised to writers teachers and researchers alike by this very fluidity and diversity in our discipline and is exemplified here with contributions from academics curators editors and biographers including Neal Ascherson Victoria Glendinning Professor Kathryn Hughes Hanif Kureishi Blake Morrison and Lawrence Goldman editor of the Oxford Dictionary of National Biography This collection of essays from CLN offers the reader our founding contribution to the debates that surround this era defining genre and as such presents both the state of the art and the spirit of our age **Comprehensive Biotechnology XI** Dr. A.
