International Law Jan Klabbbers, 2013-03-28 Written by one of the world's leading international lawyers this is a landmark publication in the teaching of international law International law can be defined as the rules governing the legal relationship between nations and states but in reality it is much more complex with political diplomatic and socio economic factors shaping the law and its application This refreshingly clear concise textbook encourages students to view international law as a dynamic system of organizing the world Bringing international law back to its first principles the book is organised around four questions where does it come from To whom does it apply How does it resolve conflict What does it say Building

on these questions with both academic rigour and clarity of expression Professor Klabbers breathes life and energy into the subject Footnotes point students to the wider academic debate while chapter introductions and final remarks reinforce learning

Melancholy Order Adam M. McKeown, 2008 As Adam M McKeown demonstrates the push for increased border control and identity documentation is the continuation of more than 150 years of globalization Modern passports and national borders are not only inseparable from the rise of global mobility They are also tied to the emergence of individuals and nations as the primary sites of global power and identity McKeown's history links the practices of border control to attempts to control Asian migration around the Pacific in the 1880s New policies to control mobility had to be justified in the context of contemporary liberal ideas of freedom and mobility generating such principles as the belief that migration control is a sovereign right of receiving nations and that it should occur at a country's borders McKeown shows how the enforcement of these border controls required migrants to be extracted from social networks of identity and reconstructed as isolated individuals within centralized filing systems Methods originally created to exclude Asians from full participation in the family of civilized nations are now the norm between all nations and have helped to institutionalize global cultural and economic divisions such as East West and First and Third World designations

Driving Europe Frank Schipper, 2008 Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around In fact the vast majority of movement in Europe takes place on the road Travelers use the car to explore parts of the continent on their holidays and goods travel large distances to reach consumers Indeed the twentieth century has deservedly been characterized as the century of the car The situation looked very different around 1900 People crossing national borders by car encountered multiple hurdles on their way Technically they imported their vehicle into a neighboring country and had to pay astronomical import duties Often they needed to pass a driving test in each country they visited Early on automobile and touring clubs sought to make life easier for traveling motorists International negotiations tackled the problems arising from differing regulations The resulting volume describes everything from the standardized traffic signs that saved human lives on the road to the Europabus taking tourists from Stockholm to Rome in the 1950s *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century

Race, Racism, and International Law Devon W. Carbado, Kimberlé Williams Crenshaw, Justin Desautels-Stein, Chantal Thomas, 2025-08-19 What would it look like to place race at the center of international legal scholarship From its inception in the 70s and 80s critical race theory s target was the field of law revealing it to be a repository for racial power This particular critique of law was explosive because of law s putatively apolitical status making it a unique site for an intellectual sit in that has forever changed the way that race and racism are understood in American society Several decades later as indicators of populism and white nationalism spread across North America and Europe critical race theory remains markedly absent from discourses in global affairs and international law This volume opens the door for CRT to enter the international sphere Featuring contributions from 30 of today s leading scholars from around the world *Race Racism and International Law* explains how the concept of racial

difference sits at the foundation of the legal political and social structures of hierarchy that shape the contemporary global order Helmed by four pioneering experts two in CRT and two in international law the volume s approach targets regimes of power and violence that implicate racism capitalism and colonialism This volume lays the groundwork for urgent and provocative new modes of critique and analysis **East Asia Before the West** David Kang,2012 From the founding of the Ming dynasty in 1368 to the start of the Opium Wars in 1841 China has engaged in only two large scale conflicts with its principal neighbors Korea Vietnam and Japan These four territorial and centralized states have otherwise fostered peaceful and long lasting relationships with one another and as they have grown more powerful the atmosphere around them has stabilized Focusing on the role of the tribute system in maintaining stability in East Asia and fostering diplomatic and commercial exchange Kang contrasts this history against the example of Europe and the East Asian states skirmishes with nomadic peoples to the north and west Scholars tend to view Europe s experience as universal but Kang upends this tradition emphasizing East Asia s formal hierarchy as an international system with its own history and character His approach not only recasts common understandings of East Asian relations but also defines a model that applies to other hegemonies outside of the European order
