Past Perceptions:

Self and World Quassim Cassam, 1997-02-20 *Self and World* is an exploration of the nature of self awareness Quassim Cassam challenges the widespread and influential view that we cannot be introspectively aware of ourselves as objects in the world In opposition to the views of many empiricist and idealist philosophers including Hume Kant and Wittgenstein he argues that the self is not systematically elusive from the perspective of self consciousness and that consciousness of our thoughts and experiences requires a sense of our thinking experiencing selves as shaped located and solid physical objects in a world of such objects Awareness of oneself as a physical object involves forms of bodily self awareness whose importance has seldom been properly acknowledged in philosophical accounts of the self and self awareness The conception of self awareness defended in this book helps to undermine the idealist thesis that the self does not belong to the world and also the claim that the existence of subjects or persons is only a derivative feature of reality In the final part of the book Cassam argues that the existence of persons is a substantial fact about the world and that it is not possible to give a complete description of reality without claiming that persons exist This clear original and challenging treatment of one of the deepest of intellectual problems will demand the attention of all philosophers and cognitive scientists who are concerned with the self

Hume's Philosophy Of The Self Tony Pitson, 2005-06-29 First Published in 2002 Personal identity lies at the very heart of Hume s philosophy but has received surprisingly limited attention Hume s *Philosophy of the Self* is the first book to go beyond the famous section of the *Treatise Of Personal Identity* and explore the fundamental concern with the Self that pervades all of Hume s work A E Pitson argues innovatively that this concern rests on a crucial distinction between two aspects of personal identity our thought and our passions Hume s *Philosophy of the Self* addresses issues fundamental to the study of eighteenth century thought the Scottish Enlightenment and naturalism and offers an essential new perspective on Hume s moral philosophy epistemology and philosophy of mind

Aristotle's Theory of Abstraction Allan Bäck, 2014-07-02 This book investigates Aristotle s views on abstraction and explores how he uses it In this work the author follows Aristotle in focusing on the scientific detail first and then approaches the metaphysical claims and so creates a reconstructed theory that explains many puzzles of Aristotle s thought Understanding the details of his theory of relations and abstraction further illuminates his theory of universals Some of the features of Aristotle s theory of abstraction developed in this book include abstraction is a relation perception and knowledge are types of abstraction the objects generated by abstractions are relata which can serve as subjects in their own right whereupon they can appear as items in other categories The author goes on to look at how Aristotle distinguishes the concrete from the abstract paronym how induction is a type of abstraction which typically moves

from the perceived individuals to universals and how Aristotle's metaphysical vocabulary is relational. Beyond those features, this work also looks at how of universals accidents, forms, causes, and potentialities have being only as abstract aspects of individual substances. An individual substance is identical to its essence; the essence has universal features but is the singularity making the individual substance what it is. These theories are expounded within this book. One main attraction in working out the details of Aristotle's views on abstraction lies in understanding his metaphysics of universals as abstract objects. This work reclaims past ground as the main philosophical tradition of abstraction has been ignored in recent times. It gives a modern version of the medieval doctrine of the threefold distinction of essence made famous by the Islamic philosopher Avicenna.

Dancing Conflicts, Unfolding Peaces Paula Ditzel Facci, 2020-08-13. This book explores the potential of movement as a means of eliciting conflict, transformation, and unfolding peace at the intrapersonal and relational levels. It examines how peace and dance have been related in different cultures and investigates embodied ways to creatively tap the energies of conflicts, inspiring possibilities of transformation and new dynamics in relationships. Drawing on Wolfgang Dietrich's Many Peaces theory, the book discusses how different expressions of dance have been connected to different interpretations of peace and strategies for transformation. Delving into elicitive approaches to conflict transformation, the book develops an innovative framework for applying movement as an elicitive method, which it vividly presents through the author's own experiences and interviews with participants in workshops. Given its scope, the book will appeal to scholars, practitioners, and artists working at the nexus of peace, conflict, transformation, and the arts.

Time and Memory Christoph Hoerl, Teresa McCormack, 2001-04-26. The capacity to represent and think about time and the capacity to recollect the past are two of the most fundamental and least understood aspects of human cognition and consciousness. This book throws new light on central issues in the study of the mind by uniting for the first time psychological and philosophical approaches dealing with the connection between temporal representation and memory. Fifteen specially written essays by leading psychologists and philosophers investigate the way in which time is represented in memory and the role memory plays in our ability to reason about time. They offer insights into current theories of memory processes and of the mechanisms and cognitive abilities underlying temporal judgements and draw out fundamental issues concerning the phenomenology and epistemology of memory and our understanding of time. The chapters are arranged into four sections, each focused on one area of current research: I. Keeping Track of Time and Temporal Representation; II. Memory Awareness and the Past; III. Memory and Experience; IV. Knowledge and the Past. The Epistemology and Metaphysics of Time. A general introduction gives an overview of the topics discussed and makes explicit central themes which unify the different philosophical and psychological approaches.

The Cambridge Companion to Hume David Fate Norton, Jacqueline Taylor, 2008-12-08. Although best known for his contributions to the theory of knowledge, metaphysics, and philosophy of religion, Hume also influenced developments in the philosophy of mind, psychology, ethics, political and economic theory, political and social

history and aesthetic theory The fifteen essays in this volume address all aspects of Hume's thought The picture of him that emerges is that of a thinker who though often critical to the point of scepticism was nonetheless able to build on that scepticism a constructive viable and profoundly important view of the world Also included in this volume are Hume's two brief autobiographies and a bibliography suited to those beginning their study of Hume This second edition of one of our most popular Companions includes six new essays and a new introduction and the remaining essays have all been updated or revised

Self Continuity Fabio Sani, 2010-08-18 This volume is the first to bring together the fast growing research on self continuity from multiple perspectives within and beyond social psychology The book covers individual and collective aspects of self continuity while a final section explores the relationship between these two forms Topics include environmental and cultural influences on self continuity the interplay of autobiographical memory and personal self continuity the psychological function of self continuity personal and collective self continuity and resistance to change The volume is rounded off with commentaries on the central issues and themes that have been discussed The book provides a unique sourcebook for this important topic and will appeal not only to upper level students and researchers in social psychology but in view of the multiple perspectives represented in the volume it will also appeal to cognitive developmental and personality psychologists

Perception Tyler Burge, 2022 Tyler Burge offers an agenda setting scientifically rigorous account of the most primitive form of representational mind perception He explains how perception works and how it relates to other mental capacities conation attention memory anticipation affect learning imagining and clarifies the distinction between perceiving and thinking

Hume's Difficulty Donald L.M. Baxter, 2012-11-12 In this volume the first focused study of Hume on time and identity Baxter focuses on Hume's treatment of the concept of numerical identity which is central to Hume's famous discussions of the external world and personal identity Hume raises a long unappreciated and still unresolved difficulty with the concept of identity how to represent something as a medium betwixt unity and number Superficial resemblance to Frege's famous puzzle has kept the difficulty in the shadows Hume's way of addressing it makes sense only in the context of his unorthodox theory of time Baxter shows the defensibility of that theory against past dismissive interpretations especially of Hume's stance on infinite divisibility Later the author shows how the difficulty underlies Hume's later worries about his theory of personal identity in a new reading motivated by Hume's important appeals to consciousness Baxter casts Hume throughout as an acute metaphysician and reconciles this side of Hume with his overarching Pyrrhonian skepticism

Strawson and Kant Hans-Johann Glock, 2003 Sir Peter Strawson is not just among the greatest living philosophers but also the leading proponent of analytic Kantianism His seminal *Individuals* rehabilitated metaphysics as a respectable enterprise within analytic philosophy It also inaugurated a distinctly Kantian project descriptive metaphysics and placed the idea of transcendental arguments at the centre of epistemological metaphysical and methodological debate This was followed by *The Bounds of Sense* a brilliant and provocative discussion of the First Critique which continues to influence Kant

scholarship by way of inspiration and opposition alike While there have been anthologies on Strawson and on transcendental arguments this is the first book to cover Strawson s relation to Kant as a whole It combines Strawson s own account of that relation with papers by eminent pupils admirers and critics Among the contributors are leading Kant scholars metaphysicians and historians of analytic philosophy The papers divide into three kinds Some of them Strawson Glock Hacker Bird Cassam Stroud deal with general questions concerning the nature of Strawson s Kantianism and of his rehabilitation of metaphysics Some Westphal Rosefeldt de Gaynesford Allison F rster are devoted to more specific topics in Kant In others Grundmann and Misselhorn Stern Hyman the focus is more on Strawson than on Kant The collection ranges from Kant interpretation and the history of analytic philosophy through philosophical logic metaphysics and epistemology to the philosophy of mind and aesthetics In this it reflects the range of Strawson s own philosophical interests and achievements The questions discussed are of central importance not just to Kant scholarship but also to contemporary analytic philosophy They include the question of whether philosophy can achieve a priori insights and whether these insights concern reality or our way of thinking about reality the nature of the self the character of aesthetic appreciation and of perception and the prospects for meeting the challenge of scepticism
