Past The Edges:

A Study of the Asymmetric Transonic Flow Past a Sharp Leading Edge Howard A. Stine, Cleo B. Wagoner, Alvin L. Lugen, 1960 An experimental and theoretical study has been made of the two dimensional transonic flow past a 12 wedge airfoil with lower surface inclined 13 to the air stream The experimental portion of the study consists of surveys of the flow field about the leading edge in a closed throat tunnel near choking Mach number by means of an X ray densitometer From these surveys various features have been determined namely the location of the stagnation point the location of the sonic line the size of the separation bubble on the upper surface and the value of the Mach number at the bubble edge These features were relatively insensitive to changes in Reynolds number in the range from 1×10^6 to 3×10^6 based on chord The theoretical portion of the study consists of the calculation by relaxation methods of an unbounded inviscid two dimensional flow about a portion of the same body at a free stream Mach number of exactly unity The calculations yield a separation bubble on the upper surface which has a shape shown to be compatible with known theoretical conditions for viscous attachment to the upper surface of the body Agreement between theoretically calculated and the experimentally determined features of the flow was good in regions where the local Mach number was 2 or less In regions of higher local Mach number the agreement was fair The theoretically determined Mach number on the bubble edge was 2.80 whereas the experimentally determined value was 2.30 The theoretically determined length of the separation bubble was 1.54 percent chord whereas the experimentally determined length was about 5 percent chord The theoretically determined location of the stagnation point was 0.16 percent chord from the leading edge whereas the experimentally determined location was at 0.56 percent chord The experience gained in studying the flow suggests the possibility that the solution obtained is not unique and that another solution in better agreement with experiment might exist

Perspectives on the Past Geoffrey A. Clark, 2017-11-15 Perspectives on the Past shows how knowledge of the past is contingent and is largely determined by the social and intellectual milieu in which those who study it have received their training In the original essays that comprise the volume field archaeologists discuss their own biases and the effects these biases have on the way they conduct their research on hunter gatherers in the Mediterranean

Past forward LU Shaoming, Anna Irene Del Monaco, Dina Nencini, 2017-11-30 This book is born from the will to undertake a joint research path on the general theme of transformation and renewal of urban contexts deepening the case of historical Chinese and Italian cities The research collected case studies and theoretical elaborations focusing on the Chinese city of Shanghai and Chongqing and other Italian urban realities filtering contents around thematic nodes such as memory narration and reflection on new urban models In particular the initial idea emerged from shared reflections between Chinese and Italian scientific professors responsible for international agreements established between the Department of Architecture and the Design of Sapienza University of Rome and Chinese remarkable institutions Indeed the present research promoted and directed by Dina Nencini was joined by Anna Irene Del Monaco of

Past and Present in DeNOx Catalysis: From Molecular Modelling to Chemical Engineering Pascal Granger,Vasile Pârvulescu,2007-12-15 This book offers an overview of the state of the art in the field of DeNOx catalysis in order to focus novel orientations new technological developments from laboratory to industrial scale A particular attention has been paid towards the implementation of catalytic processes for minimising NOx emissions either from stationary or mobile sources under lean condition to meet future standard regulations of NOx emissions In the first part of this book critical aspects reported in the literature which usually make difficult the achievement of efficient catalytic technologies in those conditions are summarised and analysed in order two separate new perspectives The second part deals with fundamental aspects at molecular level A better understanding of the reactions involved under unsteady state conditions is probably a pre requisite step for improving the performances of the actual processes or developing original ones The development of powerful in situ spectroscopic techniques is of fundamental interest for kinetic modelling Correlations between spectroscopic and kinetic data with those obtained from theoretical calculations are reported Some illustrations emphasise the fact that these comparisons may help in determining the nature of the catalytic active sites and building predictive tools for simulations under running conditions The latter part of this book will be illustrated by different practical approaches covering various aspects related to the catalysts preparation and the development of alternative technologies which include industrial considerations New technological developments for investigating catalytic reactions in transient conditions in situ and operando spectroscopic techniques Concerted approaches in DeNOx catalysis How academic aspects kinetic in situ spectroscopic measurements can provide useful information for practical applications Comparison of different approaches provided by academic and industrial partners
