Patch Testing:

Patch Testing S. Fregert, H.-J. Bandmann, 2012-12-06 The patch test epicutaneous test and photo patch test are used to clarify the etiology and diagnosis of allergic as well as light potentiated contact dermatitis The patch test must be correlated with historic data and physical examination Contact dermatitis constitutes a significant proportion 5% 15% of the diseases at dermatologic clinics If the results are to be reliable patch tests should be performed properly and the technique should not be varied in an arbitrary manner The examiner should adhere strictly to the standard procedure so as to understand its possibilities and its limitations Interpretation of the actual patch test reactions places high demands on the experience and skill of the examiner and on his knowledge of chemistry and pharmacology This monograph is concerned only with the patch test method used to demonstrate the existence of contact allergy and light potentiated contact allergy It does not describe the prophetic patch test predictive patch test which is used to demonstrate the sensitizing capacity of a substance The terminology in the text is that recommended by the International Contact Dermatitis Research Group In this book dermatitis eczema 1 2 Historic Development Joseph Jadassohn devised the epicutaneous test In 1895 he tested a syphilitic patient who developed a cutaneous eruption after treatment with mercury ointment
