Shah,1994 Physical Material Properties of High Temperature Superconductors High Temperature Superconducting Magnetic Levitation Jia-Su Wang,Su-Yu Wang,2017-12-18 The authors begin this book with a systematic overview of superconductivity superconducting materials magnetic levitation and superconducting magnetic levitation the prerequisites to understand the latter part of the book that forms a solid foundation for further study in High Temperature Superconducting Magnetic Levitation HTS Maglev This book presents our research progress on HTS Maglev at Applied Superconductivity Laboratory ASCLab of Southwest Jiaotong University SWJTU China with an emphasis on the findings that led to the world s first manned HTS Maglev test vehicle Century The book provides a detailed description on our previous work at ASCLab including the designing of the HTS Maglev test and measurement method as well as the apparatus building Century developing the HTS Maglev numerical simulation system and making new progress on HTS Maglev The final parts of this book discuss research and prototyping efforts at ASCLab in several adjacent fi elds including HTS Maglev bearing Flywheel Energy Storage System FESS and HTS maglev launch technology We hope this book becomes a valuable source for researchers and engineers working in the fascinating field of HTS Maglev science and engineering Contents Fundamentals of superconductivity Superconducting materials Magnetic levitation Superconducting magnetic levitation HTS Maglev experimental methods and set up First manned HTS Maglev vehicle in the world Numerical simulations of HTS Maglev New progress of HTS Maglev vehicle HTS Maglev bearing and flywheel energy storage system HTS Maglev launch technology **High Tc Superconductors** J. Dumas,H.W. Neumüller,H.F. Braun,V.P. Seminozhenko,Yu.D. Tretyakov,1993-05-05 A wide range of progress in materials development single crystals ceramics thin films wire and tapes is reported in the 169 papers in this volume The main focus of the papers is in attaining a better understanding of the relationship between microstructure and electrical properties Invited papers cover topics such as the effects of substitution and doping multilayers nanostructure characterisation electric field effects in High Tc Superconductors HTS surface stability critical currents flux pinning and magneto optic imaging of flux patterns effects of irradiation induced defects properties and preparation of materials microwave properties and electronic devices A clearly broadened basis for understanding processes and mechanisms in HTS is portrayed Appreciable progress has been achieved in the reproducible manufacturing of high quality materials supported

by very efficient methods in microstructural analysis This essential improvement is reflected in the increased number of practical devices encouraging the use of HTS in applications for electronics and power engineering all of which are reviewed in depth in this work Advances in Superconductivity VII Kaoru Yamafuji,Tadataka Morishita,2012-12-06 The field of high temperature superconductivity has encouraged an inter disciplinary approach to research It has required significant cooperation and collaboration among researchers each of whom has brought to it a rich variety of experience from many other fields Recently great improvements have been made in the quality of research The subject has matured and been launched into the next stage through the resonance between science and technology The current progress of materials processing and engineering in this field is analogous to that previously seen in the development of semiconductors These include the appearance of materials taking the place of YBa₂Cu₃O₇ owing to their improved properties higher critical temperatures and stronger flux pinning in which rare earth ions with large radii La Nd Sm substitute for Y the development of technology enabling growth control on the nanometer scale and precise and reproducible measurements that can be used as rigorous tests of theoretical models which in turn are expected to lead to the development of new devices For further progress in high T research academics and technologists must pool their knowledge and experience I hope that this volume will promote that goal by providing the reader with the latest results of high temperature superconductor research and will stimulate further discussion and collaboration *High-Tc Superconducting Technology* Muralidhar Miryala,2021-11-24 Mitigating climate change clean environment global peace financial growth and future development of the world require new materials that improve the quality of life Superconductivity in general allows perfect current transmission without losses This makes it a valuable resource for sustainability in several aspects High temperature superconducting HTSC materials will be crucial for sustainable everyday applications and more attractive for the United Nations SDGs Superconducting magnets can be used as high field magnets in magnetic resonance imaging nuclear magnetic resonance water purification magnetic drug delivery etc Hunger can be partly avoided if there is sustainability in agriculture In the future DC electric energy from solar plants in Africa could be transported worldwide especially to cold countries using superconducting cables Superconducting technology is an efficient way to create sustainability as well as reduce greenhouse gases This book presents the latest global achievements in the processing and applications of high Tc superconductors and discusses the usefulness of the SDGs It summarizes the related advances in materials science and developments with respect to the SDGs The book also covers large scale applications of HTSC materials which will be connected to the SDGs addressed by several eminent scientists including Prof M Murakami president Shibaura Institute of Technology Japan Prof D Cardwell pro vice chancellor University of Cambridge UK and Prof N Long director Victoria University of Wellington New Zealand
