**Pulmonary Embolism. Prevalence, Diagnosis and Management** Patrick Kimuyu, 2017-12-19 Essay from the year 2017 in the subject Medicine, Epidemiology, grade 1, Egerton University, language English, abstract. Pulmonary embolism is usually a life-threatening condition that occurs due to blockage of the main artery carrying blood to the lungs. This blockage is caused by a blood clot that is carried in the bloodstream to the lung, primarily from the leg, following deep vein thrombosis. From a primary care perspective, pulmonary embolism is not considered as a disease with its etiology. Rather, it arises as a complication of a number of conditions that cause venous thrombosis, such as deep vein thrombosis, pregnancy, and postoperative complications. This literature review focuses on evaluating current evidence-based guidelines for diagnosis and management of pulmonary embolism.
