Moore,1997 Building Bodies is an exciting collection of articles that strive toward constructing theoretical models in which power bodies discourse and subjectivity interact in a space we can call the built body a dynamic politicized and biological site Contributors discuss the complex relationship between body building and masculinity between the built body and the racialized body representations of women body builders in print and in film and homoeroticism in body building Linked by their focus on the sport and practice of body building the authors in this volume challenge both the way their various disciplines media studies literary criticism gender studies film and sociology have gone about studying bodies and existing assumptions about the complex relationship between power subjectivity society and flesh Body building in practice in representation and in the cultural imagination serves as an launching point because the sport and practice provide ready challenges to existing assumptions about the built body

Photographing Ambiguity Ted Hiebert,2025-05-02 Photographing Ambiguity examines photography as a metaphor for technological culture arguing that a relational exploration of the medium can shed light on the dominant ideological tendencies of our time The book advocates for photographic practices that emphasize ambiguity suggesting that this approach fosters more conscientious ecological and creative relationships within the technological ecosystem of contemporary life Ted Hiebert critiques the notion that images should primarily serve to verify or document the external world He contends that these quantifiable perspectives while rooted in historical trends towards technology and data have become so pervasive that they represent a dominant ideological bias in the twenty first century In response to this data driven consciousness the book presents a series of exercises designed to cultivate an embodied experience with digital living not in opposition to the flood of images but within it Ultimately Photographing Ambiguity encourages readers to understand photographs not as benchmarks of reality but as ambiguous constructions of our present and future imaginaries **Digital**

Ground-water Hydrology Ralph C. Heath,1983 *Magnetically Activated and Guided Isotope Separation* Thomas R. Mazur,2015-11-19 This thesis describes a proof of principle experiment demonstrating a technique for stable isotope enrichment called Magnetically Activated and Guided Isotope Separation MAGIS Over the past century many enriched isotopes have become available thanks largely to electromagnetic separators called calutrons Due to substantial maintenance and operating costs the United States decommissioned the last of its calutrons in 1998 leading to demand for alternative methods of isotope separation The work presented here suggests the promise for MAGIS as a viable alternative to the calutrons The MAGIS technique combines optical pumping with a scalable magnetic field gradient to enrich atoms of a specific isotope in an atomic beam Benchmarking this work against the calutron using lithium as a test case the author demonstrated comparable enrichment in a manner that should scale to the production of similar quantities while requiring vastly less energy input
