Purine And Pyrimidine Metabolism In Man Vi:

Purine and Pyrimidine Metabolism in Man VI Kiyonobu Mikanagi, Kusuki Nishioka, William N. Kelley, 1989 Purine and Pyrimidine Metabolism in Man VI K. Mikanagi, 2012-12-06 These two volumes contain articles presented at the VIth International Symposium on Human Purine and Pyrimidine Metabolism held in Hakone Japan July 17 through 21 1988 The first meeting of this series of symposia convened in Tel Aviv Israel and since then meetings have taken place every three years in various parts of the world The second meeting was held in Baden Austria the third in Madrid Spain the fourth in Maastricht the Netherlands and fifth in San Diego California The VIth meeting in Hakone marked the first such symposium held in Asia On occasion of publishing these books I would like to describe how research in this field has evolved in Japan Early in the 1950s I was engaged in clinical practice treating various rheumatic diseases as an orthopedicist and found that a substantial percentage of our patients had symptoms apparently compatible with gout During the 1960s the number of these gouty patients increased and in the 1970s research on the pathogenesis of gout was performed on the basis of approximately 2 000 cases of this disease together with precise epidemiological studies concerning gouty and hyperuricemic individuals Data derived from the two kinds of study had greatly changed the notion that gout was a rare disease among Japanese My clinical studies have been succeeded by research at the molecular level on various purine metabolic abnormalities including not only gout but also other diseases with various symptoms of wide clinical spectra *Purine and Pyrimidine Metabolism in Man VIII* Amrik Sahota, Milton W. Taylor, 2013-11-11 These volumes record the presentations made at the VIII International Symposium on Purine and Pyrimidine Metabolism in Man held at Indiana University Bloomington USA from May 22 May 27 1994 This was a continuation of meetings held every three years with the idea of bringing clinicians and basic scientists together which we hope results in cross fertilization of ideas Some of the papers presented in this volume represent oral contributions and others are from posters but we emphasize that both are considered of equal merit As is obvious from a perusal of the titles of the papers there has been a shift in the focus of this meeting which reflects a general shift in the area of purine and pyrimidine metabolism The emphasis has definitely shifted to gene structure and molecular genetics with the beginnings we hope of gene therapy as an important branch of this area of science Although many of the inherited diseases discussed in this text can be treated with drugs the major thrust in the future will be in gene therapy where the gene or cDNA will be used to treat the patient with enzyme deficiency particularly if the patient is young As can be seen from the list of authors there is a remarkable degree of international cooperation in this area across countries and continents We thank the many participants who have attended these symposia many times and we welcome the large group of scientists from Eastern Europe who are attending this meeting for the first time *Purine and Pyrimidine Metabolism in Man IX* Andrea Griesmacher, Peter Chiba, Mathias M. Müller, 2012-12-06 This volume comprises articles presented at the joint IX International and 6 European Symposium on Purine and Pyrimidine Metabolism in Man held in Gmunden Austria June 1

through 7 1997 Since the first of this series of meetings was held in Israel in 1973 conventions were organized every three years in different parts of the world including the USA Japan and Europe The different aspects of purine and pyrimidine metabolism bring together researchers working in molecular genetics biochemical pharmacology biochemistry developmental biology immunology epidemiology and the clinics Oriented research in the field has been seminal for the development of potent anticancer and antiviral drugs As the number of genes which are cloned grows the understanding of metabolism is increasingly enlarged and might provide leads to further improve therapeutic concepts and to better understand mechanisms responsible for the development of resistance against these drugs In certain diseases purine and pyrimidine analogs represent not only the drugs of choice but in fact are the sole therapeutic alternative at present The field has also taken an early lead in attempting to correct inborn errors of purine and pyrimidine metabolism by gene therapy The organization of this meeting involved a large number of people who dedicated their time in an effort to make this symposium a success We thank the Abstract Review Committee the International Advisory Board and in particular the Symposium Secretariat for doing a wonderful job
