Purine And Pyrimidine Metabolism:

Purine and Pyrimidine Metabolism Katherine Elliott, David W. FitzSimons, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Purine and Pyrimidine Metabolism in Man**, 2004 *Purine and Pyrimidine Metabolism in Man VIII* Amrik Sahota, Milton W. Taylor, 2013-11-11 These volumes record the presentations made at the VIII International Symposium on Purine and Pyrimidine Metabolism in Man held at Indiana University Bloomington USA from May 22 May 27 1994 This was a continuation of meetings held every three years with the idea of bringing clinicians and basic scientists together which we hope results in cross fertilization of ideas Some of the papers presented in this volume represent oral contributions and others are from posters but we emphasize that both are considered of equal merit As is obvious from a perusal of the titles of the papers there has been a shift in the focus of this meeting which reflects a general shift in the area of purine and pyrimidine metabolism The emphasis has definitely shifted to gene structure and molecular genetics with the beginnings we hope of gene therapy as an important branch of this area of science Although many of the inherited diseases discussed in this text can be treated with drugs the major thrust in the future will be in gene therapy where the gene or cDNA will be used to treat the patient with enzyme deficiency particularly if the patient is young As can be seen from the list of authors there is a remarkable degree of international cooperation in this area across countries and continents We thank the many participants who have attended these symposia many times and we welcome the large group of scientists from Eastern Europe who are attending this meeting for the first time *Purine and Pyrimidine Metabolism* Katherine Elliott, 1977 **Ciba Foundation Symposium 48 - Purine and Pyrimidine Metabolism** Ciba Foundation, *Purine and Pyrimidine Metabolism in Man V* W. L. Nyhan, 2013-03-13 The Fifth International Symposium on Human Purine and Pyrimidine Metabolism was held in San Diego California U S A in July and August of 1985 Previous meetings in this series were held in Tel Aviv Israel Baden Austria Madrid Spain and Maastricht The Netherlands The proceedings of each of these meetings were published by Plenum The next meeting will be in Japan This Symposium differed from those that went before in that it permitted us to honor Dr J E Seegmiller Professor of Medicine at the University of California San Diego for his many contributions to our understanding of purine metabolism in man This publication is dedicated as a Festschrift to Jay Dr Richard W E Watts delivered the keynote address outlining in scholarly fashion the history of Dr Seegmiller's accomplishments in research on purine metabolism and the great number of currently active scientists in this field who have worked with him This address is published as the first contribution to Volume I Dr Dewitt Stetten Jr was scheduled to be the speaker at our banquet Unfortunately he could not be with us Dr Seegmiller has written an appreciation of Dr Stetten and his contributions to our field and this has been pub

lished following Dr Watts paper The growth of knowledge in purine and pyrimidine metabolism continues to be exponential The variety of subjects included in these volumes is impressive ***Purine and Pyrimidine Metabolism in Man X*** Esther Zoref-Shani, Oded Sperling, 2006-04-11 th This volume contains articles presented at the X International Symposium on Purines and Pyrimidines in Man held on May 14 19 2000 in Tel Aviv Israel The first symposium in this series took place in Tel Aviv in 1973 Since then the symposium has been held every three years in different parts of the world including Europe USA and Japan The participants in this series of symposia are characterised by a wide interest in the various aspects of purines and pyrimidines in man which include biochemistry genetics pharmacology physiology clinics etc Presentations in the symposia include clarification of metabolic pathways characterisation of enzyme structure and kinetics and discoveries of new inborn errors of metabolism and suggestions for new therapeutic approaches for these inborn errors In addition development of new purine and pyrimidine derivatives for the treatment of cancer and viral diseases and many more subjects of mutual interest were brought to the fore With the development of therapeutic means and of new research tools we have witnessed changes in the areas of interest The interest in gout and uric acid urolithiasis has lessened whereas molecular aspects the role of purine and pyrimidine substances in neurotransmission and in purinergic signaling appear to gain greater interest The articles included in this volume contain new data pertaining to the various aspects detailed above ***Purine and Pyrimidine Metabolism in Man VI*** K. Mikanagi, 2012-12-06 These two volumes contain articles presented at the VIth International Symposium on Human Purine and Pyrimidine Metabolism held in Hakone Japan July 17 through 21 1988 The first meeting of this series of symposia convened in Tel Aviv Israel and since then meetings have taken place every three years in various parts of the world The second meeting was held in Baden Austria the third in Madrid Spain the fourth in Maastricht the Netherlands and fifth in San Diego California The VIth meeting in Hakone marked the first such symposium held in Asia On occasion of publishing these books I would like to describe how research in this field has evolved in Japan Early in the 1950s I was engaged in clinical practice treating various rheumatic diseases as an orthopedicist and found that a substantial percentage of our patients had symptoms apparently compatible with gout During the 1960s the number of these gouty patients increased and in the 1970s research on the pathogenesis of gout was performed on the basis of approximately 2 000 cases of this disease together with precise epidemiological studies concerning gouty and hyperuricemic individuals Data derived from the two kinds of study had greatly changed the notion that gout was a rare disease among Japanese My clinical studies have been succeeded by research at the molecular level on various purine metabolic abnormalities including not only gout but also other diseases with various symptoms of wide clinical spectra ***Purine and Pyrimidine Metabolism in Man VI*** Kiyonobu Mikanagi, Kusuki Nishioka, William N. Kelley, 1989 ***Purine and Pyrimidine Metabolism in Man VII*** R. Angus Harkness, T.B. Elion, N. Zöllner, 2012-12-06 These two volumes record the scientific and clinical work presented at the VIIth International and 3rd European joint symposium on purine and pyrimidine metabolism in man held at the Bournemouth

International Conference Centre Bournemouth UK from 30th June to 5th July 1991 The series of international meetings at three yearly intervals have previously been held initially in 1973 in Israel then Austria Spain the Netherlands USA and Japan The European Society for the Study of Purine and pyrimidine Metabolism in Man ESSPPM which has its own executive and some finance first met in Switzerland in 1987 then in Germany in 1989 The steady evolution of the science in this series of meetings is intellectually satisfying the subsequent clinical progress is emotionally and economically reassuring As befits the position of purines and pyrimidines at the centre of biochemistry there has been steady scientific development into molecular genetics and now onto developmental controls and biochemical pharmacology The complexities of the immune system are being unravelled but an understanding of the human brain largely eludes us Laboratory based scientists now predominate over those who work as clinical specialists in Vli rheumatology immunology oncology and paediatrics However there continue to be major clinical objectives since large sections are concerned with major causes of death like ATP depletion cancer and now AIDS the laboratory work is providing clinical solutions
