P. J. Brenchley, Peter Franklin Rawson

Sedimentation And Tectonics Of The Welsh Basin:

Sedimentation and Tectonics of the Welsh Basin W. R. Fitches, N. H. Woodcock, 1987 There has been a recent upsurge in research into structural geology and sedimentology of Wales The breadth and the quantity of the activity particularly in previously under researched areas is reflected Chapters are arranged in approximate time order of the events described and new field data are set in their local tectonic context Speculation on models for the plate tectonic setting of Early Palaeozoic Wales is included with an examination of the necessary components *The Geology of England and Wales* P. J. Brenchley, Peter Franklin Rawson, 2006 This second edition of The Geology of England and Wales is considerably expanded from its predecessor reflecting the increase in our knowledge of the region and particularly of the offshore areas Forty specialists have contributed to 18 chapters which cover a time range from 700 million years ago to 200 million years into the future A new format places all the chapters in approximately temporal order Both offshore and economic geology now form an integral part of appropriate chapters Cambrian of SW Wales A.J. Rees, A.T. Thomas, M. Lewis, H.E. Hughes, P. Turner, 2014-11-25 This Memoir reviews revises and interprets the biostratigraphy lithostratigraphy process sedimentology palaeoenvironments and sequence stratigraphy of the classic Cambrian succession of SW Wales This 1250m thick clastic sedimentary succession of Terreneuvian to Furongian age was deposited in environments ranging from alluvial fan to mid outer shelf Two lithostratigraphical groups are distinguished each comprising six formations where possible and appropriate original and well known names are retained in harmony with current usage High resolution sequence stratigraphical techniques constrained by biostratigraphical data whenever possible allow the revised lithostratigraphy to be integrated with the western Avalonian chronostratigraphy developed in maritime Canada A twofold subdivision is recognized Megasequence 1 sequences 3-7 spans the Terreneuvian C2 and much of C3 with deposition occurring in an extensional rift like regime on an epeirogenically active platform Sequence 8 lies at the base of Megasequence 2 which extends from late C3 into the early Ordovician and represents passive margin sedimentation **Caledonian Structures in Britain** J.E. Treagus, 2012-12-06 This volume deals with those sites selected as part of the Geological Conservation Review GCR within the southern British part of the Caledonides that is the paratectonic Caledonides a Caledonian terrane without strong and pervasive deformation and metamorphism such as occurred further north This orogenic belt formed by long and complex processes of earth movements between 500 and 380 million years before the present late Cambrian to mid Devonian times and has been classic ground for geologists for two hundred years It is perhaps no accident that James Hutton in 1795 chose to illustrate his geostrophic cycle and unconformity with three visually explicit examples of the deformation wrought on Lower Palaeozoic rocks by Caledonian events The former Caledonian mountain chain which can be seen today in fragmented pieces in Scandinavia Britain and Ireland and North America was ultimately the result of the collision of two continental plates and the closure of a former ocean Iapetus Some of these fragments including those in Scandinavia southern Britain and the Republic

of Ireland and the Maritime Provinces of Canada are thought to have lain on the south side of the ocean before collision the rest of North America northern Ireland and Scotland are thought to have lain north of the former Iapetus Geology and Tectonics of the Lake Superior Basin Richard John Wold, William J. Hinze, 1982-01-01 A Turbid Tale Antony Wyatt, 2000

Marine Clastic Sedimentology Jeremy K. Leggett, 2012-12-06 Tarquin Teale a sedimentology stratigraphy postgraduate student at the Royal School of Mines was killed in a road accident south of Rome on 17 October 1985 Premature death is a form of tragedy which can make havoc of the ordered progress which we try to impose on our lives As parents relatives and friends we all know this and yet somehow when it touches our own world there is no consolation to be found anywhere In Tarquin's case the enormity of the loss felt by those of us who knew him can barely be expressed in words Tarquin had everything which we aspire to His fellow graduate students envied his dramatic progress in research We his advisors in appreciating this progress marvelled at how refreshingly rare it was to see such precocious talent combined with such a caring modest and well balanced personality He was destined for the highest honours in geoscience and there is no doubt that he would have lived a life had he been granted the chance which would have spread colour intellectual insight and goodness *Tectonic Controls and Signatures in Sedimentary Successions* Lynne E. Frostick, 2009-04-13 Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession Until better criteria are developed to distinguish between the roles played by the major variables it is still most useful to document and interpret basin fill architectures where we know from independent evidence that one of the main controls is likely to have been a major contributor This book contains a collection of papers describing situations where the tectonic setting is fairly well established and it can be assumed that at least the tectonic factor has contributed to the resultant signatures **Petroleum Abstracts. Literature and Patents**, 1990 European Coal Geology M. K. G. Whateley, D. A. Spears, 1995 **New Perspectives on the Old Red Sandstone** Geological Society of London, 2000

Geological History of Britain and Ireland Nigel H. Woodcock, R. A. Strachan, 2012-04-12 Britain and Ireland have a remarkably varied geology for so small a fragment of continental crust with a fine rock record back through three billion years of geological time This history would have been interesting enough if it had been played out on relatively stable continental crust However Britain and Ireland have developed at a tectonic crossroads on crust once traversed by subduction zones and volcanic arcs continental rifts and mountain belts The resulting complexity is instructive fascinating and perplexing Geological History of Britain and Ireland tells the region's story at a level accessible to undergraduate geologists as well as to postgraduates professionals or informed amateurs This second edition is fully revised and updated reflecting our continually developing knowledge of the region's geology Full coverage is again given to the rich Precambrian and Early Palaeozoic history as well as to later events more relevant to hydrocarbon exploration The book is an essential starting point

for more detailed studies of the regional geology Additional resources for this book can be found at <http://www.wiley.com/go/woodcock/geologicalhistory>

Deformation of Sediments and Sedimentary Rocks Mervyn E. Jones, R. M. F. Preston, 1987

Bibliography and Index of Geology, 1992

Tracing Tectonic Deformation Using the Sedimentary Record Tom McCann, Aline Saintot, 2003

The study of sediments and sedimentary basins in terms of their tectonic environment requires a multidisciplinary approach and has increasingly drawn both techniques and objectives from fields outside sedimentology

Studies presented in this volume range across a wide spectrum from the analysis of sedimentary sequence architecture at basin scale down to the chemical properties of individual grains and include studies from a range of tectonic settings

Paleotectonics and Sedimentation in the Rocky Mountain Region, United States James A. Peterson, American Association of Petroleum Geologists, 1986

Petroleum Geology of Northwest Europe J. R. Parker, 1993

Confined Turbidite Systems Simon A. Lomas, Philippe Joseph, Geological Society of London, 2004

This publication reflects a growing appreciation of the extent to which turbidite depositional system development is fundamentally affected by basin floor topography

In the many turbidite and turbidite hydrocarbon reservoirs depositional patterns have been moderately to strongly confined by pre-existing slopes

This volume examines aspects of sediment dispersal and accumulation in deep water systems where sea floor topography has exerted a decisive control on deposition and explores the associated controls on hydrocarbon reservoir architecture and heterogeneity
