What is seismic energy?

Seismic energy is the energy that travels through the Earth during an earthquake. It is the energy that causes the ground to shake. This energy is released from the focus of the earthquake and travels outwards in all directions. The energy is carried by seismic waves, which are the vibrations that travel through the Earth's interior and along its surface.

What are seismic waves?

Seismic waves are the vibrations that travel through the Earth's interior and along its surface. They are the energy that is released from the focus of the earthquake and travels outwards in all directions. There are three main types of seismic waves: P-waves, S-waves, and surface waves. P-waves are the fastest and travel through the Earth's interior. S-waves are the second fastest and travel through the Earth's interior. Surface waves are the slowest and travel along the Earth's surface.

How do seismic waves travel?

Seismic waves travel through the Earth's interior and along its surface. P-waves travel through the Earth's interior and are the fastest. S-waves travel through the Earth's interior and are the second fastest. Surface waves travel along the Earth's surface and are the slowest. The speed of seismic waves depends on the type of wave and the material it is traveling through.

How do seismic waves cause earthquakes?

Seismic waves cause earthquakes by shaking the ground. The vibrations that travel through the Earth's interior and along its surface cause the ground to shake. This shaking can be felt by people and can cause damage to buildings and other structures. The shaking is caused by the energy that is released from the focus of the earthquake and travels outwards in all directions.
