Integrated Pest Management Biorational and Ecological Perspective Dharam P. Abrol, 2017-04-01 Human population is growing rapidly disproportionate to food supply which necessitate production of more volume of food in the near future. The reliance on insecticides for quick and dramatic results was not totally free from adverse effects. This book intends to fill the gap by providing a critical analysis of different management strategies that have a bearing on agriculture sustainability and environmental protection. This book emphasizes the management strategies with evaluation of each strategy in the bigger picture of ecologically driven pest management. This book includes 24 chapters which cover ecological and biorational basis of pest management, integrated pest and disease management, crop breeding for resistance, use of entomopathogenic nematodes and other agents, remote sensing, biosecurity issues, risk to biodiversity by exotic species, new and emerging pests of horticultural crops, saffron and stored grains, the role of extension technologies in dissemination of IPM and future challenges and strategies. The book is aimed to serve as reference book for teachers, researchers, extension officers and policy makers associated with IPM. This book can also be used as supplementary reading material in undergraduate and postgraduate courses. This book provides a multidisciplinary IPM perspective to entomologists, plant pathologists, extension educationists, anthropologists and economists.

Handbook on the integrated crop management of green gram and chickpea for farmer field schools in central dry zone of Myanmar Food and Agriculture Organization of the United Nations, 2022-08-01 This curriculum briefly outlines Integrated pest management (IPM) for these selected crops, green gram and chickpea. The general concept of IPM is the same for these crops although the insect pests, diseases and weeds differ from one crop to another. The names of pests are listed for information and important messages that are unique to Myanmar's situation are briefed if necessary rather than giving a detailed account of morphology, biology, ecology and management which can be readily available in published literature. It aims to improve farmers' knowledge of the pests including insects, plant diseases, weeds and rodents causing the reduction in the yield of field crops and how to manage the crops to boost crop production without deteriorating environmental resources for sustainable agriculture.
