Naturalists Adventure In Nepal:

Development and Public Health in the Himalaya Ian Harper, 2014-02-05 Engaging with a range of public health issues this book charts important social and political transitions in Nepal through the lens of medicine and health development. It focuses on mission health care institutions, tuberculosis control programmes as a site of medical intervention, the pharmaceuticalization of mental health and public health and in relation to development ideologies, the attempted creation of modern subjects and citizens to advance the health of the nation. Based on two decades of experience both as a physician and public health professional and an anthropologist, the author presents these issues through four case studies of health programme intervention in a district in central Nepal to show the inter-related aspects of the processes. The book explains how local realities align with, resist and are complicated by globalized narratives and practices of health and development. It pays careful attention to traditional healers, infectious disease, micronutrient initiatives, mental health and the historical, ideological and political-economic context of mission-based development work. Offering an ethnographic picture of the challenges and possibilities for action that exist in Nepal, this book is of interest to academics in the field of medical and development anthropology and those working directly in the fields of health and development. **Ornithology in**

Laboratory and Field Olin Sewall Pettingill, 2013-10-02 Ornithology in Laboratory and Field is intended as an aid to ornithological study at the college or university level. Students who lack the background knowledge usually acquired during a course in general zoology or biology should keep it handy for ready reference, a standard elementary text on the subject. This book contains extensive material for purely informational reading, possibly enough to supplant the need of an additional textbook. Its principal purpose still complies with the title of its predecessors for it is essentially a manual to guide and assist the student in direct observations. All twenty sections except the last, 'The Origin, Evolution and Decrease of Birds', suggest methods and provide instructions for studies and all conclude with an extensive list of references frequently annotated for further information. The twenty sections of the book can be taken up in almost any order and some may be omitted without affecting the instructional value of the others. A feature of this new edition is an introduction to birds and ornithology intended for reading at the beginning of a course. The purpose is twofold: to show the significance of birds for study and to give an overall preview of ornithology, the subject with emphasis on its wide scope, how it is studied and some of the continuing and exciting opportunities that it offers for investigation. *Fallen Giants* Maurice Isserman, Stewart Angus

Weaver, Dee Molenaar, 2010-01-01 In the first comprehensive history of Himalayan mountaineering in 50 years, the authors offer detailed original accounts of the most significant climbs since the 1890s and they compellingly evoke the social and cultural worlds that gave rise to those expeditions. **Nepal National Union Catalogue** Bhanu Pathak, Damodar
