Familiar Lectures on Botany Mrs. Lincoln Phelps, 1829 The Hunterian Lectures in Comparative Anatomy, May and June 1837 Richard Owen, 1992-08-15 Sir Richard Owen 1804 1892 comparative anatomist colleague and later antagonist of Darwin and head of the British Museum of Natural History was a major figure in Victorian science Yet historians of science have found Owen a difficult subject in part because he chose not to expound his views in a major theoretical work but rather presented them through annual lectures at the Royal College of Surgeons from 1837 to 1856 Nevertheless Owen s views on the nature of life the relations of form and function the meaning of fossils and the development of species gave his contemporaries such as Lyell Grant Huxley Whewell and Darwin a set of positions with which they could agree or disagree while developing their own views Now for the first time modern readers have access to the opening series of Owen s Hunterian Lectures in which he set out the larger framework of the theoretical reflections that occupied him during the next nineteen years Presented to the public in the two months before Darwin began his first notebook on the species question these lectures reveal the nature of the synthesis of French German and British biology taking place in metropolitan London in this crucial period in nineteenth century life science Phillip Reid Sloan has transcribed and edited the seven surviving lectures and has written an introduction and

commentary situating the work in the context of Owen's life and the scientific and intellectual life of the time Sloan pays particular attention to Owen's early relations to the German scientific and philosophical tradition and in this respect contributes to an understanding of the relations between science and British Romanticism In the lectures Owen surveys the history of comparative anatomy up to his time and develops his views on the nature of life species duration physiological function and the relation between embryology and classification One can see the degree to which transcendental anatomy and the views of Von Baer Johannes Müller E G St Hilaire and Cuvier were current in London in the late 1830s from back cover
