Nature Conservation In Greenland:

Nature Conservation in Greenland: Research, Nature and Wildlife Management Ivalo Egede, 1991 Protected Areas of the World: Nearctic and neotropical ,1991 **Greenland** Niels Elers Koch, 2023-12-06 Greenland provides extensive and richly illustrated area specific knowledge about Greenland's nature and landscape history culture society and businesses as well as its towns and settlements A total of 87 mainly Greenlandic researchers and experts have contributed with their knowledge to this book about the most essential topics from Cape Morris Jesup to Uummannarsuaq Cape Farewell and from Qaanaaq to Danmarkshavn Covering almost 2.5 million km² and with a population of around 56,000 Greenland is the world's largest island and most sparsely populated area Gain an insight into the history of geological formations and read about the ice sheet which as a result of melting and global warming is now the subject of increased international interest Understand the background of the marvelous icebergs at Qeqertarsuup Tunua and take the dog sled or snowmobile to the small remote and self sufficient settlements Take a tour of the capital of Nuuk and the other towns on the southern part of the west coast This was where Danish Norwegian missionary Hans Egede first set foot in 1721 and from where the Danish colonization began which had a severe impact on Inuit culture Read about modernization endeavors the calls for secession the influence of the rock band Sume and the referendums in 1979 and 2008 that led to Greenlandic self government Learn about the traditional culture featuring elements such as the drum dance which has seen renewed interest and has been included on UNESCO's World Heritage List of Intangible Cultural Heritage Greenland covers all the essentials From the most common to the most special **On the Nature of Ecological Paradox** Michael Charles Tobias, Jane Gray Morrison, 2021-05-18 This work is a large powerfully illustrated interdisciplinary natural sciences volume the first of its kind to examine the critically important nature of ecological paradox through an abundance of lenses the biological sciences taxonomy archaeology geopolitical history comparative ethics literature philosophy the history of science human geography population ecology epistemology anthropology demographics and futurism The ecological paradox suggests that the human biological and from an insular perspective successful struggle to exist has come at the price of isolating *H. sapiens* from life sustaining ecosystem services and far too much of the biodiversity with which we find ourselves at crisis level odds It is a paradox dating back thousands of years implicating millennia of human machinations that have been utterly ruinous to biological baselines Those metrics are examined from numerous multidisciplinary approaches in this thoroughly original work which aids readers particularly natural history students who aspire to grasp the far reaching dimensions of the Anthropocene as it affects every facet of human experience past present and future and the rest of planetary sentience With a Preface by Dr Gerald Wayne Clough former Secretary of the Smithsonian Institution and President Emeritus of the Georgia Institute of Technology Foreword by Robert Gillespie President of the non profit Population Communication

Bottom Trawling and Scallop Dredging in the Arctic Elena Guijarro Garcia,2007 **Inventing Greenland** Bert De Jonghe,2022-03-25 Inventing Greenland is a critical and timely assemblage of stories highlighting a shifting landscape one born from the imagination projections and ambitions of a wide range of actors Geared towards a design audience this book combines spatial sensibilities with Greenland s local cultural social and environmental realities Inventing Greenland is a critical and timely assemblage of stories highlighting a shifting landscape one born from the imagination projections and ambitions of a wide range of actors Today especially within the design discipline there is a lack of understanding of Greenland as a complex constellation of perspectives histories and forces This book aims to fill that knowledge vacuum Geared towards architects landscape architects and urban planners this book combines spatial sensibilities with local cultural social and environmental realities More specifically spatial sensibility is a way of responding to and reading beyond a diverse array of relationships in the built environment Furthermore Inventing Greenland provides a broad understanding of a unique island undergoing intense transformation while drawing attention to its historical and current challenges and emerging opportunities Distinctly each individual story is anchored to a common thread and interest in architecture landscape architecture and urbanism Such discourse may serve to prepare designers at large as they take on projects in a rapidly developing Arctic In the past the extremeness of Greenland s landscape did not impede the first immigration of Inuit hunting tribes Norsemen from becoming Greenland Vikings and European explorers from searching for new trade routes and eventually reaching the North Pole Every single one of them read saw and understood the Greenlandic landscape differently while projecting their hopes and dreams onto new landscapes seascapes and icescapes As will become apparent similar hopes and dreams of the early settlers and explorers continue in postcolonial times in a different set of actors among them the U S military foreign investors and an Inuit run government **The regional travel guide for Qeqqata (Greenland)**,2025-09-25 *Nipisat - a Saqqaq Culture Site in Sisimiut, Central West Greenland* Anne Birgitte Gotfredsen,Tinna Møbjerg,2004 From 1989 to 1994 more than 200 m2 were excavated at the Saqqaq site of Nipisat situated on a small island 15 km south of Sisimiut The excellent preservation conditions for organic material and the fact that some of the stone artefacts were not previously known from the Saqqaq Culture were the main reasons for the excavation More than 70 000 bone fragments 20 000 flakes and 1 000 artefacts were recovered A total of 33 dates making this site one of the best dated in the entire Arctic reveal that Nipisat was occupied continuously for nearly 1 500 years Although protruding bedrock disturbed

the stratigraphy and several lenses of crushed shells interrupted the layers three different chronological phases could be identified Phase 1 is dated by eight 14C dates ranging from 2020 to 1740 BC cal Phase 2 partly overlaps but is mainly younger than phase 1 and dated by five 14C dates to 1860 1325 BC cal Phase 3 is dated by 16 14C dates to 1310 810 BC cal One date was very young 520 BC cal and problematic because of extreme oscillations of the 14C curve From phase 1 there is a mid passage structure with a box hearth A ring of flagstones surrounds the structure From phase 2 there is a well defined box hearth There was no clear outline of a tent ring surrounding the hearth which could be due to later disturbances in phase 3 No dwelling structures were recognised from phase 3 Instead several sherds of soapstone were recorded indicating the use of blubber for light or cooking From phase 1 and 2 the tool types are well known from other Saqqaq sites in Greenland and Arctic Canada e g small harpoon endblades projectile points knife blades scrapers burins etc and needles flint flakers harpoon heads wedges etc But from phase 3 previously unknown types were recorded A new tool kit for sea mammal hunting is seen in the very sturdy harpoon or lance head made of antler In addition there are many different kinds of barbed leisters or spears New types of bevelled harpoon heads bevelled knife blades and bevelled projectile points all made of killiaq silicified slate were also registered The faunal assemblage of Nipisat yielded 28 823 identified bone fragments representing at least 42 species of fish birds and mammals The fish remains comprising c 2% of the faunal material consisted nearly entirely 98% of fairly large sized cod The bird remains comprise c 47% of the material and derive from at least 24 bird species Gulls are the dominant group c 54% of the bird remains followed by eider ducks spp 24% and spp 13% presumably barnacle geese while auks were found in lower frequencies The most spectacular finds however were skeletal remains of subadult great auks from the oldest phase A total of 60 presumed whooper swan remains constitute the hitherto largest northernmost and oldest occurrence in Greenland At least 14 mammalian species were identified revealing a surprisingly large proportion of caribou 51% of the mammal remains for a coastal site Seals accounted for 45% with the common seal as the absolutely dominant component Other marine mammals were walrus and harbour porpoise which played an important but minor role Polar bear hunting was documented by the presence of four fragments from the youngest phase Saqqaq people were accompanied by fairly large and robust dogs Nipisat the first larger Saqqaq site to be excavated from the Open Water Area was a coastal site and through all occupation phases the game animals of the surrounding waters and fjords were hunted For more than a millennium the site was visited briefly from time to time at least during spring summer and early autumn Staging geese were captured during spring In June and July the breeding birds were exploited for their eggs and easily accessible young as documented by large numbers of juvenile gull bones in particular The common seal hunting specialised on immature individuals caught primarily during their first summer on the breeding grounds The inhabitants at Nipisat also hunted caribou on the mainland The age structure and sex distribution of the caribou remains primarily reflect stalking Selected body parts especially the fore and hind legs and the heads were transported to the island for raw material

meat filleting and further processing for marrow extraction and fat rendering The exploitation of fauna through the entire occupation period was remarkably constant with respect to choice of game animal and the selected age groups Although eiders were more abundant in phase 1 36% than in phase 3 17% while gulls increased from 43 to 61% in the same time period The same trend was found valid for geese which increased over time while the importance of auks decreased Harbour porpoise seem to have decreased while walrus increased in relative importance through time Caribou seem to be of greater importance in phase 3 with 55% compared to 45% in phase 1 The slight shift in preferred resources may be explained by fluctuating abundance and availability of the game species combined with the development of new hunting tools Based on the new investigations in the Sisimiut District the gap between Saqqaq and Dorset Culture in Central West Greenland has been diminished Although resource exploitation at the site seems to have been very stable through all three phases there are aspects of cultural change bridging the transition from Saqqaq to Dorset Cultures The introduction of bevelled tools sturdy harpoon or lance heads and the abandonment of the bow and arrow in phase 3 show cultural affiliation with Dorset technology This is also true in terms of lithic raw material preference the introduction of soapstone artefacts and the absence of dwelling structures with a well defined box hearth At the same time it looks like the central occupation area for the Saqqaq Culture shifted southwards from the Qeqertarsuup Tunua area towards Sisimiut and Nuuk

The Politics of Sustainability in the Arctic Ulrik Pram Gad, Jeppe Strandsbjerg, 2018-10-04 The Politics of Sustainability in the Arctic argues that sustainability is a political concept because it defines and shapes competing visions of the future In current Arctic affairs prominent stakeholders agree that development needs to be sustainable but there is no agreement over what it is that needs to be sustained In original conservationist discourse the environment was the sole referent object of sustainability however as sustainability discourses have expanded the concept has been linked to an increasing number of referent objects such as society economy culture and identity This book sets out a theoretical framework for understanding and analysing sustainability as a political concept and provides a comprehensive empirical investigation of Arctic sustainability discourses Presenting a range of case studies from Greenland Norway Canada Russia Iceland and Alaska the chapters in this volume analyse the concept of sustainability and how actors are employing and contesting this concept in specific regions within the Arctic In doing so the book demonstrates how sustainability is being given new meanings in the postcolonial Arctic and what the political implications are for postcoloniality nature and development more broadly Beyond those interested in the Arctic this book will also be of great value to students and scholars of sustainability sustainable development and identity and environmental politics
