There is no shortage of reference on the weapons that fought the Second World War, but the weapons they carried have been largely ignored, except for the most basic particulars. This situation is entirely rectified by this new book, which is completely encyclopaedic in scope and largely based on original research. Divided by country (including those present but ultimately involved in the war), the book covers all the major weaponry of the period. Weapons of earlier design which were employed during the war, and those in experimental, trials or development stages in 1945, are also included.

Features include:

- Summary of factors affecting naval armament design and procurement
- Technical introductions to each weapon type, covering fire control, propellant, projectiles, etc
- Over 500 tables of data

- In-depth descriptions of every weapon, its characteristics, design history and performance
- More than 500 illustrations including detailed plans and drawings.

Considering its size, scope and complexity, *Naval Weapons of World War Two* must be regarded as one of the most important naval reference works of recent years.

Naval Weapons Of World War Two:

Naval Weapons of World War Two N. J. M. Campbell, John Campbell, 1985 British Naval Weapons of World War Two Norman Friedman, 2020-07-30 John Lambert was a renowned naval draughtsman whose plans were highly valued for their accuracy and detail by modelmakers and enthusiasts By the time of his death in 2016 he had produced over 850 sheets of drawings many of which have never been published These have now been acquired by Seaforth and this is the third of a planned series of albums on selected themes reproducing complete sheets at a large page size with an expert commentary and captioning The initial volumes concentrate on British naval weaponry used in the Second World War thus completing the project John Lambert was working on when he died His interest was always focused on smaller warships and his weapons drawings tend to be of open mountings the kind that present a real challenge to modelmakers rather than enclosed turret guns but he also produced drawings of torpedo tubes underwater weapons fire control directors and even some specific armament related deck fittings Following the earlier volumes on destroyer and escort armament this one covers the multitude of weapons carried by Coastal Forces many of which were improvised ad hoc or obsolescent but eventually leading to powerful purpose designed weaponry An appendix covers the main deck guns carried by British submarines of this era The drawings are backed by introductory essays by Norman Friedman an acknowledged authority on naval ordnance while a selection of photographs adds to the value of the book as visual reference Over time the series will be expanded to make this unique technical archive available in published form a move certain to be welcomed by warship modellers enthusiasts and the many fans of John Lambert's work **Secret Weapons and World War II** Walter E. Grunden, 2005 Grunden's analysis of this fundamental flaw in the Japanese war effort seamlessly weaves together science technology and military history to provide an entirely unique look at a crucial but understudied aspect of World War II Comparing the science and weapons programs of all the major combatants he demonstrates that Japan's failure was nearly inevitable given its paucity of strategic resources an inadequate industrial base the absence of effective centralized management to coordinate research military hostility toward civilian scientists and bitter interservice rivalries In the end Japan could not overcome these obstacles and thus failed to make the transition to the kind of Big Science it needed to ward off its enemies and dominate the Far East
