Ecological Effects of Fire in South African Ecosystems P. de V. Booysen, N. M. Tainton, 2012-12-06 This is a stimulating tale of the interplay of observation experimentation working hypotheses tentative conclusions niggling and weightier doubts and great aspirations on the part of some score of students on varied ecological and other aspects of the regime and role of fire in relevant biomes and ecosystem mainly in South Africa and on other pertinent features of fire ecology The impressive contents is a tribute to conveners and authors alike One can expect a profound range and depth of investigation and interpretation a close knit fabric of knowledge delicately interwoven with wisdom an exposition and quintessence of information Admiring is the collective vision responsible for selecting appropriate topics the wide sweeps of the brush picturing the nature of the biomes ably describing the fire regimes whether in grassland savanna fynbos or forest skillfully defining the effects of such regimes according to ecosystem upon aerial and edaphic factors of the habitat upon constituent biota individually specifically and as a biotic community elucidating the basic implications in the structure and dynamics of the plant aspect of that community and unravelling to some degree the tangled knot of the conservation and dissipation of moisture and nutrients Moreover gratitude is owed for efforts exerted to understand the interplay of fire and faunal behaviour and dynamics as well as composition together with the principle of adaptive responses of organisms of diverse kinds **Farming in South Africa**, 1926 *Biogeography and Ecology of Southern Africa* Marinus J.A.

Werger, A.C. van Bruggen, 2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the watershed between the Zambezi and Rufiji Rivers on the one hand and the Zambezi Kunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of

organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa

Innovations as Key to the Green Revolution in Africa

Andre Bationo,Boaz Waswa,Jeremiah M. Okeyo,Fredah Maina,Job Maguta Kihara,2011-08-30 Africa can achieve self sufficiency in food production through adoption of innovations in the agriculture sector Numerous soil fertility and crop production technologies have been generated through research however wide adoption has been low African farmers need better technologies more sustainable practices and fertilizers to improve and sustain their crop productivity and to prevent further degradation of agricultural lands The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change

Ecology of Tropical Savannas B. J. Huntley, B. H. Walker, 2012-12-06

Soil Degradation and Restoration in Africa Rattan Lal, B. A. Stewart, 2019-07-09

Soil degradation is a widespread problem in Africa resulting in decreased agricultural productivity while demand for food continues to increase. Degradation is caused by accelerated erosion, acidification, contamination, depletion of soil organic matter and plant nutrients, and salinization. The major cause of soil degradation in Africa is uncontrolled and excessive grazing in the savanna regions, followed by deforestation and the use of inappropriate and extractive farming practices. Perpetual neglect of the health of soils in Africa can exacerbate the already serious problems of food and nutritional insecurity and environmental degradation. Food and nutritional security of the growing population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently and sustainably. Ignoring soils and taking the fragile, finite, and precious soil resources for granted is the principal cause of poverty, hunger, and environmental degradation. The downward spiral must be reversed through soil restoration measures based on translating science into action. This book describes the soils of Africa, processes of soil degradation, extent and severity of soil degradation, and the impacts of degradation processes on food and nutritional security. Features: Explores the extent and severity of soil degradation in Africa; Analyzes the cause-effect relationship between anthropogenic activities and soil degradation; Reviews processes of soil degradation in Africa, including erosion, salinization, nutrient depletion, and decline of soil organic matter; Addresses the effect of climate change on soil degradation in Africa; Explains how soil degradation causes food and nutritional insecurity. Part of the *Advances in Soil Sciences* series, this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa.

Grasslands of the World Food and Agriculture Organization of the United Nations, 2005-01-01

This book brings together information on the contrasting characteristics, condition, present use, and problems of the world's main natural grasslands. Since grassland is commercialized through the grazing animal, particular attention is paid to the livestock production systems associated with each main type. Grazing resources are more than simply edible herbage; many other factors have to be taken into account, notably water in all areas and shelter in winter-cold climates. Seasonality of forage supply is a characteristic of almost all grazing lands, so the strategies for dealing with lean seasons are described. The main problems of each type are mentioned, and possible strategies for their sustainable management are discussed, taking into account their multiple functions, not only livestock production. The book is primarily aimed at agricultural scientists, educationalists, extensionists, and decision makers with interests in responsible use of extensive grasslands.
