## **Peptide Regulatory Factors:**

**Gastrointestinal Regulatory Peptides** David R. Brown, 2012-12-06 Since the discovery of the pancreatic secretagogue secretin by W M BAYLISS and E H STARLING at the inception of the twentieth century intense interest has focused on numerous continually expanding classes of small peptides which appear to serve as regulatory molecules in the gastrointestinal tract brain and other organ systems Initially many of these substances were like secretin discovered in functional assays as factors or activities extractable in minute quantities from tissues or tissue fluids By the middle of the century advances in biochemical and immunological methods for the purification characterization and quantification of biologically active peptides in organ systems tissues and body fluids provided further impetus to this field It was readily appreciated that small biologically active peptides were particularly abundant in the digestive tract Many peptides such as vasoactive intestinal peptide gastrin and more recently peptide YY and galanin were in fact originally discovered in and isolated from gut tissue Moreover these peptides were found to have profound actions on the gastroenteropancreatic system in vivo and in vitro During the past 2 decades information on regulatory peptides has burgeoned as a result of technological refinements in the synthesis of peptides improved methods for detecting and visualizing peptides and their precursors in cells and tissues from a variety of species advances in the functional assessment of peptide activity and the application of molecular biological techniques to the characterization of peptide gene structure and expression [Trends in Regulatory Peptides](#) Hubert Vaudry, Marie-Christine Tonon, David Vaudry, 2018-07-24 Regulatory peptides represent the most diverse and versatile family of messenger molecules They are produced by all living organisms from bacteria to mammals They are involved in a wide variety of biological functions Biologically active peptides and their receptors thus constitute an unlimited source of inspiration for the development of innovative drugs and cosmetics The present eBook is a unique collection of research articles and reviews that provide a representative exemplification of the latest progress in regulatory peptide research

**Handbook of Growth Factors** Enrique Pimentel, 1994-06-02 Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and postreceptor mechanism of action and its role in neoplastic processes Regulatory peptides with growth factor like properties such as bombesin angiotensin endothelin atrial natriuretic factor vasoactive intestinal peptide and bradykinin are examined in depth Factors related to the growth of organs such as the prostate the heart and the mammary gland are also covered [Peptide Growth Factors and Their Receptors II](#) Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with

selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible literature At the same time it is becoming increasingly apparent that these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artificial they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research *Regulatory Peptides in Neuroscience and Endocrinology: A New Era Begins* Lee E. Eiden, Limei Zhang, Colin Brown, David Vaudry, 2019 This Research Topic features recent developments in the field of regulatory peptide physiology and peptide based therapeutics Peptide Regulatory Factors Lancet Staff, Tony Green, 1989

**Gerontological Aspects of Genome Peptide Regulation** V. K. Khavinson, V. V. Malinin, 2005-04-07 This monograph highlights the gerontological aspects of the peptide regulation of gene expression It focuses on the mechanisms of the geroprotective action of peptides related to chromatin activation increase in telomerase enzyme activity and elongation of telomeres in different cells A key role in the initiation of the biological activity of peptide is its interaction with DNA which provides genetic stability and a normalization of the age related metabolic shifts Study of the genetic mechanisms of peptide action suggests a new concept which most comprehensively reflects on the evolutionary biological role peptide plays in the organism The impact of peptides on the expression and structure of genes opens a new gate for the prevention of premature aging and age related pathology which appears to be most promising in pharmacogenomics This monograph narrates not only the theoretical aspects and experimental data but also outlines new approaches to the prevention of aging and age related pathology thus addressing a wide readership of gerontologists geneticists molecular biologists biochemists and pharmacologists alike *Neuropeptide Function in the Gastrointestinal Tract* Edwin E. Daniel, 2019-08-15 First published in 1991 This book assimilates and evaluates the rapidly accumulating information regarding neuropeptides in the gut their chemistry genetic control processing in enteric nerves the projections of their nerves their actions at the tissue cell and molecular levels and their roles in controlling gut motility in health and disease *Neuropeptide Function in the Gastrointestinal Tract* is directed to scientists in all disciplines who work with neuropeptides as well as physiologists interested in the neural and smooth muscle actions of neuropeptides Growth Factors, Peptides, and Receptors Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1 5 1992 The theme of the meeting was Growth Factors Peptides and Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor

Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer
