Proc Of The Eighth World Conference Volume 1:

Proceedings of Eighth International Congress on Information and Communication Technology Xin-She Yang,R. Simon Sherratt,Nilanjan Dey,Amit Joshi,2023-07-25 This book gathers selected high quality research papers presented at the Eighth International Congress on Information and Communication Technology held at Brunel University London on 20-23 February 2023. Mathematical Models for the Design of Electrical Machines Frédéric Dubas,Kamel Boughrara,2021-03-15 This book is a comprehensive set of articles reflecting the latest advances and developments in mathematical modeling and the design of electrical machines for different applications. The main models discussed are based on the i) Maxwell-Fourier method, i.e. the formal resolution of Maxwell's equations by using the separation of variables method and the Fourier series in 2-D or 3-D with a quasi-Cartesian or polar coordinate system; ii) electrical, thermal and magnetic equivalent circuit; iii) hybrid model. In these different papers, the numerical method and the experimental tests have been used as comparisons or validations.

Visualization and Processing of Tensor Fields Joachim Weickert,Hans Hagen,2007-06-25 Matrix-valued data sets, so-called second-order tensor fields, have gained significant importance in scientific visualization and image processing due to recent developments such as diffusion tensor imaging. This book is the first edited volume that presents the state of the art in the visualization and processing of tensor fields. It contains some longer chapters dedicated to surveys and tutorials of specific topics as well as a great deal of original work by leading experts that has not been published before. It serves as an overview for the inquiring scientist as a basic foundation for developers and practitioners and as a textbook for specialized classes and seminars for graduate and doctoral students.

Inductive Logic Programming Francesco Bergadano,Daniele Gunetti,1996 Although Inductive Logic Programming (ILP) is generally thought of as a research area at the intersection of machine learning and computational logic, Bergadano and Gunetti propose that most of the research in ILP has in fact come from machine learning, particularly in the evolution of inductive reasoning from pattern recognition through initial approaches to symbolic machine learning to recent techniques for learning relational concepts. In this book, they provide an extended up-to-date survey of ILP, emphasizing methods and systems suitable for software engineering applications, including inductive program development, testing and maintenance. Inductive Logic Programming includes a definition of the basic ILP problem and its variations: incremental with queries for multiple predicates and predicate invention capabilities; a description of bottom-up operators and techniques such as least general generalization, inverse resolution and inverse implication; an analysis of top-down methods, mainly MIS and FOIL-like systems; and a survey of methods and languages for specifying inductive bias. Logic Programming series.
