Department of Energy, National Energy Technology Laboratory (U.S.), 2013 This project is for an integrated gasification combined cycle IGCC power generating facility called Hydrogen Energy California HECA in Kern County California The project as proposed would gasify blends of petroleum coke 25 % and coal 75% to produce hydrogen to fuel a combustion turbine operating in combined cycle mode The gasification component would produce 180 million standard cubic feet per day MMSCFD of hydrogen to feed a 400 megawatt MW gross 288 MW net combined cycle plant providing California with dispatchable baseload power to the grid The gasification component would also capture approximately 130 MMSCFD of carbon dioxide or approximately 90 percent at steady state operation which would be transported and used for enhanced oil recovery and sequestration storage in the Elk Hills Oil Field Unit The HECA project would also produce approximately 1 million tons of fertilizer for domestic use California Energy Commission web site Docket 08 AFC 8A United States Code, 1976 Ed., Supplement 1:- Titles 42-50 United States, 1979 Management, 1982 *Congressional Record* United States. Congress, 2010 Life Cycle Assessment of Energy Systems Nicholas Sakellariou, 2018-05-04 This groundbreaking work is the most in depth and state of the art study on the Life Cycle Assessment LCA of energy systems the only volume available on this critical subject Energy and sustainability are two of the most important and often most misunderstood subjects in our world today As these two subjects have grown in importance over the last few decades interest in the Life Cycle Assessment LCA model has grown as well as a potentially crucial tool in understanding and striving towards sustainability in energy systems Not just wind and solar systems but all

energy systems need to be understood through this model Wind and solar power have the potential to decentralize the U S energy system by offering local communities electricity and economic support depending on the scale and design of projects Nevertheless every energy technology potentially faces environmental costs lay and expert opposition and risks to public health Engineers play a central role as designers builders and operators in energy systems As they extend their expertise into electrical mechanical and chemical fields from fossil fuel based systems to renewable energy systems sustainability is steadily becoming one of the key criteria engineers apply in their work This groundbreaking new study argues that engineering cultures foster sustainability by adopting assumptions and problem solving practices as part of their identities when designing and building engineering projects This work examines the politics of creating utilizing and modifying Life Cycle Assessment LCA in the construction of renewable energy systems The only volume of its kind ever written it is a must have for any engineer scientist manager or other professional working in or interested in Life Cycle Assessment and its relation to energy systems and impact on environmental and economic sustainability **Energy Abstracts for Policy Analysis** ,1984 Basics Design 05: Colour Gavin Ambrose,Paul Harris,2007-05-18 Basics Design 05 Colour is a guide to the use of colour in graphic design Colour is used to represent thoughts and emotions in a way that no other element of design can This book explores in depth what colours mean their inherent associations and cultural connotations It then tackles how to control colour in a design in order to achieve a desired effect or to fulfil a specific brief Starting with the basic principles of colour how light works colour wheels colour combinations and harmonies the book builds on these principles and explains how the designer can accurately and intentionally control colour *Resources in Education* ,1979

Scientific and Technical Aerospace Reports ,1989 **Solarnomics** David Wright,2022-04-05 Solar power has come of age Not only has it become one of the key alternatives to fossil fuels it can now be deployed in a way that makes a viable business with a financial profit This book shows industry professionals and students how to do just that Solarnomics describes the economics of building and operating a solar power plant today and provides a window into a future in which several technologies collaborate and in which all participants in the electricity grid become smarter at scheduling both the supply and demand for electric power to give humanity a future that is sustainable both environmentally and economically The book shows how to estimate costs and revenues how to tweak the design of a project to improve profitability how to calculate return on investment how to assess and deal with risk how to raise capital how to combine solar with batteries to make a hybrid microgrid and how to be prepared for future developments in the evolving smart electricity grid Solarnomics will enable professionals in the solar industry to assess the potential profitability of a proposed solar project and it will enable students to add an extra dimension to their understanding of sustainability
