Ohidul Haque, 2008-12-11 This book provides an empirical investigation of the employment status of Non English Speaking Background NESB and Australia born women The analysis adds to the work of Australian authors who have found that NESB women are underrepresented in occupations that have relatively high pay and congenial working conditions and are over represented amongst the unemployed This study develops a definition of primary sector employment from the occupation categories in the 1996 Census and uses the ANU2 occupational prestige scale and earnings data from the Census The book constructed univariate probit models for labour market participation and primary sector employment and unemployment for both groups of women The models were estimated using the 1% sample from the 1996 Australian Census The Census provided useful information regarding labour market status and a range of human capital and demographic variables that were relevant to the analysis These models suggested that NESB women faced disadvantages in the labour

market if they had poor English language skills or had arrived in Australia comparatively recently. The models tended to support the works of other authors who have found that education and labour market experience were significant in improving the labour market position of individuals.

**Constructing an Indicator of Consumption for the Analysis of Poverty** Jesko Hentschel, Peter Lanjouw, 1996-01-01 Living Standards Measurement Study Working Paper No 123 This paper analyzes the determinants of demand for medical services in urban areas of Bolivia. It also examines the possible trade offs between cost recovery and the use of health services for different age, sex, ethnic and income groups. The data drawn from a multipurpose household survey conducted by the World Bank and Bolivia's statistical office are used in designing an econometric model to measure the price elasticity of demand for medical care.

**Minimum Wages and Employment** C. Ragacs, 2004-06-08 Christian Ragacs develops contributions to the theory of minimum wages while taking rationing and spill over effects on markets other than the labour market into account. Following an introduction into the theory of minimum wages and a discussion of methodological problems, four new theoretical models are developed, two of them comparative static in nature and two models of endogenous growth. The results are contradictory, partly supporting the textbook theory and partly yielding unorthodox results such as no change in the steady state rates of growth and employment.

**Poverty Lines in Theory and Practice** Martin Ravallion, 1998-01-01 A poverty line helps focus the attention of governments and civil society on the living conditions of the poor. This paper offers a critical overview of alternative approaches to setting poverty lines. In reviewing the methods found in practice, the paper tries to throw light on and go some way toward resolving ongoing debates about poverty measurement, emphasizing those debates which would appear to have greatest bearing on policy discussions.
