Intelligent Agents for Telecommunications Applications Sahin Albayrak, 1998

Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems

The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway

Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain

Ralf Steinmetz,Jana Dittmann,Martin Steinebach,2013-06-05 The volume contains the papers presented at the fifth working conference on Communications and Multimedia Security CMS 2001 held on May 21-22 2001 at and organized by the GMD German National Research Center for Information Technology GMD Integrated Publication and Information Systems Institute IPSI in Darmstadt Germany The conference is arranged jointly by the Technical Committees 11 and 6 of the International Federation of Information Processing IFIP The name Communications and Multimedia Security was first used in 1995 Reinhard Posch organized the first in this series of conferences in Graz Austria following up on the previously national Austrian IT Sicherheit conferences held in Klagenfurt 1993 and Vienna 1994 In 1996 the CMS took place in Essen Germany in 1997 the conference moved to Athens Greece The CMS 1999 was held in Leuven Belgium This conference provides a forum for presentations and discussions on issues which combine innovative research work with a highly promising application potential in the area of security for communication and multimedia security State of the art issues as well as practical experiences and new trends in the areas were topics of interest again as it has already been the case at previous conferences This year the organizers wanted to focus the attention on watermarking and copyright protection for e-commerce applications and multimedia data We also encompass excellent work on recent advances in cryptography and their applications In recent years digital media data have enormously gained in importance **Understanding Changing**

Telecommunications Anders Olsson,2005-08-05 The field of telecommunications is becoming ever more complex In order to manage the new Telecom industry it is necessary not only to understand its 3 main components namely the end users the technology and networks and the business aspects but also their vital inter relationships Complexity leads to uncertainty and one effect of uncertainty is for people to underestimate the complexity of the business and the technology This book takes a holistic approach to the subject and can be used as a tool for decreasing this uncertainty During 2000 many operators paid extremely high sums of money for 3G licenses in a number of European countries supposing a potential corresponding and balancing revenue from mobile services in the new frequency band Obviously today the licenses are questionable Consequently suppliers and operators were forced to reduce their international work force What are the underlying reasons Since the true rate and level of development was hardly foreseen by anyone the picture is complex including factors such as

psychology and belief in a new economy It is immediately clear that the end user impact has been severely under estimated It is also clear that the expected development has and is happening with more speed than expected and continues to be complemented with solutions such as wireless LANs This book treats the paradigm shift from a number of angles user needs and demands deregulation of telecom and the convergence between telecommunications data communications and the media industry the service plan service implementation QoS and Security Understanding Changing Telecommunications focuses on the overall principles and context of the new telecommunications world rather than on high level technical descriptions in order to aid the understanding and development of the next generation of telecom networks e g multimedia over IP and 3G Discusses the development of telecommunications up until 2005 Provides a holistic view of the world of telecommunications Covers three main areas End users Technologies and Networks and Telecom Business and their vital inter relationships Offers support and advice for those needing to implement business plans Essential reading for staff with operators and providers involved in the telecom networks especially management planning and design development integration and training as well as Business analysts and investors keen to understand the current state of the Telecom industry
