**The Lessons of History: The Chinese People's Liberation Army at 75**, *America's Coming War with China* Ted Galen Carpenter, 2015-03-31

One issue could lead to a disastrous war between the United States and China Taiwan A growing number of Taiwanese want independence for their island and regard mainland China as an alien nation Mainland Chinese consider Taiwan a province that was stolen from China more than a century ago and their patience about getting it back is wearing thin Washington officially endorses a one China policy but also sells arms to Taiwan and maintains an implicit pledge to defend it from attack That vague muddled policy invites miscalculation by Taiwan or China or both The three parties are on a collision course and unless something dramatic changes an armed conflict is virtually inevitable within a decade Although there is still time to avert a calamity time is running out In this book Carpenter tells the reader what the U S must do quickly to avoid being dragged into war

*The Lessons of History* Laurie Burkitt, Andrew Scobell, Larry M. Wortzel, 2003 Chinese Space Policy Roger Handberg, Zhen Li, 2006-11-29 This volume explains the beginnings and expansion of China s space

program analyzing how China is now able to hold such ambitions and how the interaction between technology politics and economics has influenced the Chinese space program It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort later focusing upon its development over the past decade and into the future As China is now able to reach into outer space with its machines and since 2003 with its humans the authors examine how this move from a non participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty first century They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space powers such as the United States and the former Soviet Union what is the value of the space program given its high costs and likelihood of dramatic failure Chinese Space Policy will be of great interest to students of space studies Chinese politics security studies and international relations in general

*A Toolbox for the Application of the Rules of Targeting* Tetyana (Tanya) Krupiy, 2016-02-29 How military commanders interpret the rules of targeting impacts not only on whether civilians and civilian objects are harmed in the course of a military operation but also on the scale of harm that ensues Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians as was the case when a coalition of states bombed targets in Libya in 2011 However limited guidance is publicly available on how military commanders apply these rules on the battlefield In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a specific set of circumstances the rules of targeting are formulated in an open ended fashion which complicates one's ability to evaluate whether a particular military operation complies with the law By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014 this book addresses lacunae in current scholarship It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios International humanitarian law this book contends places a duty on attackers to assume risk in order to mitigate danger to civilians Drawing on the field of psychology this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack

*The Evolution of Cyber War* Brian M. Mazanec, 2015 Former secretary of

defense Leon Panetta once described cyber warfare as the most serious threat in the twenty first century capable of destroying our entire infrastructure and crippling the nation Already major cyber attacks have affected countries around the world Estonia in 2007 Georgia in 2008 Iran in 2010 and most recently the United States As with other methods of war cyber technology can be used not only against military forces and facilities but also against civilian targets Information technology has enabled a new method of warfare that is proving extremely difficult to combat let alone defeat And yet cyber warfare is still in its infancy with innumerable possibilities and contingencies for how such conflicts may play out in the coming decades Brian M Mazanec examines the worldwide development of constraining norms for cyber war and predicts how those norms will unfold in the future Employing case studies of other emerging technology weapons chemical and biological strategic bombing and nuclear weaponry Mazanec expands previous understandings of norm evolution theory offering recommendations for U S policymakers and citizens alike as they grapple with the reality of cyber terrorism in our own backyard

**Intelligent and Autonomous: Transforming Values in the Face of Technology** ,2023-08-28 This book uses case analyses and industry insights and blends them with forays into philosophy and ethics to conceptualise the mismatch between human values and the values inherent in an increasingly technologized world Bringing together contributors from the disciplines of law politics philosophy and communication studies this volume develops an interdisciplinary vocabulary for thinking about the questions and antinomies of human technology interaction while also resisting any deceptively straightforward synthesis The topics discussed include the competition over and regulation of technology the harm induced by autonomous technologies and the place and role of humans in a world that is undergoing rapid and radical change

China's India War, 1962: Looking Back to See the Future Air Commodore Jasjit

Singh,2013-03-15 A potential competition exists between India and China and there is also no doubt that China started the war Highlighting the mistakes made by India rather than empirically analysing the available data can be regarded as the primary causes for the confusion that exists today Though complete details and evidence of the developments are available and documented few of us have attempted to draw up a pragmatic and realist analysis The consequences of that war have yet to die down entirely and are frequently raked up with issues on recent developments which are not widely dissimilar to those of 1962 China is a complex country To understand this rapidly progressing nation is even more difficult There are many perceptions on this country and many of them are formed on account of some international events and China s growing assertiveness It may be far fetched to expect for a paradigm change in stance and motive which could give China an uncertain negotiating position This edited volume provides the reader an excellent blend of the historical run up to the aberration the military developments and consequences It is also provides useful material to understand the geographical boundary issues between India and China and developing Chinese strategies both on the political and military front
